1. Introduction

1.1 Purpose of this document

This Interface Functional Specification (IFS) is to provide the agreed baseline of communication requirements and detailed technical specifications between the SaaS shared Training Management System (sTMS) and Nanyang Polytechnic (NYP) for transferring sTMS CET data, such as course/module information, applicants and students' information during pre-enrolment and enrolment, learners modules registration information, system codes used in the system. Refer to Appendices for the mapping of tables required for respective NYP systems.

sTMS shall identify all NYP's data with changes, generate corresponding CSV files for these data and deposit CSV files encrypted by PGP protocol in the SFTP server daily. New scheduled jobs to be implemented by NYP will retrieve, decrypt and process these PGP encrypted data files accordingly for downstream systems' data needs.

1.2 Intended Audience

This technical document is used for system communication. Therefore, the intended audiences are the stakeholders of shared Training Management System and NYP systems Common App that make use of the Common App data items.

1.3 Documentation acceptance

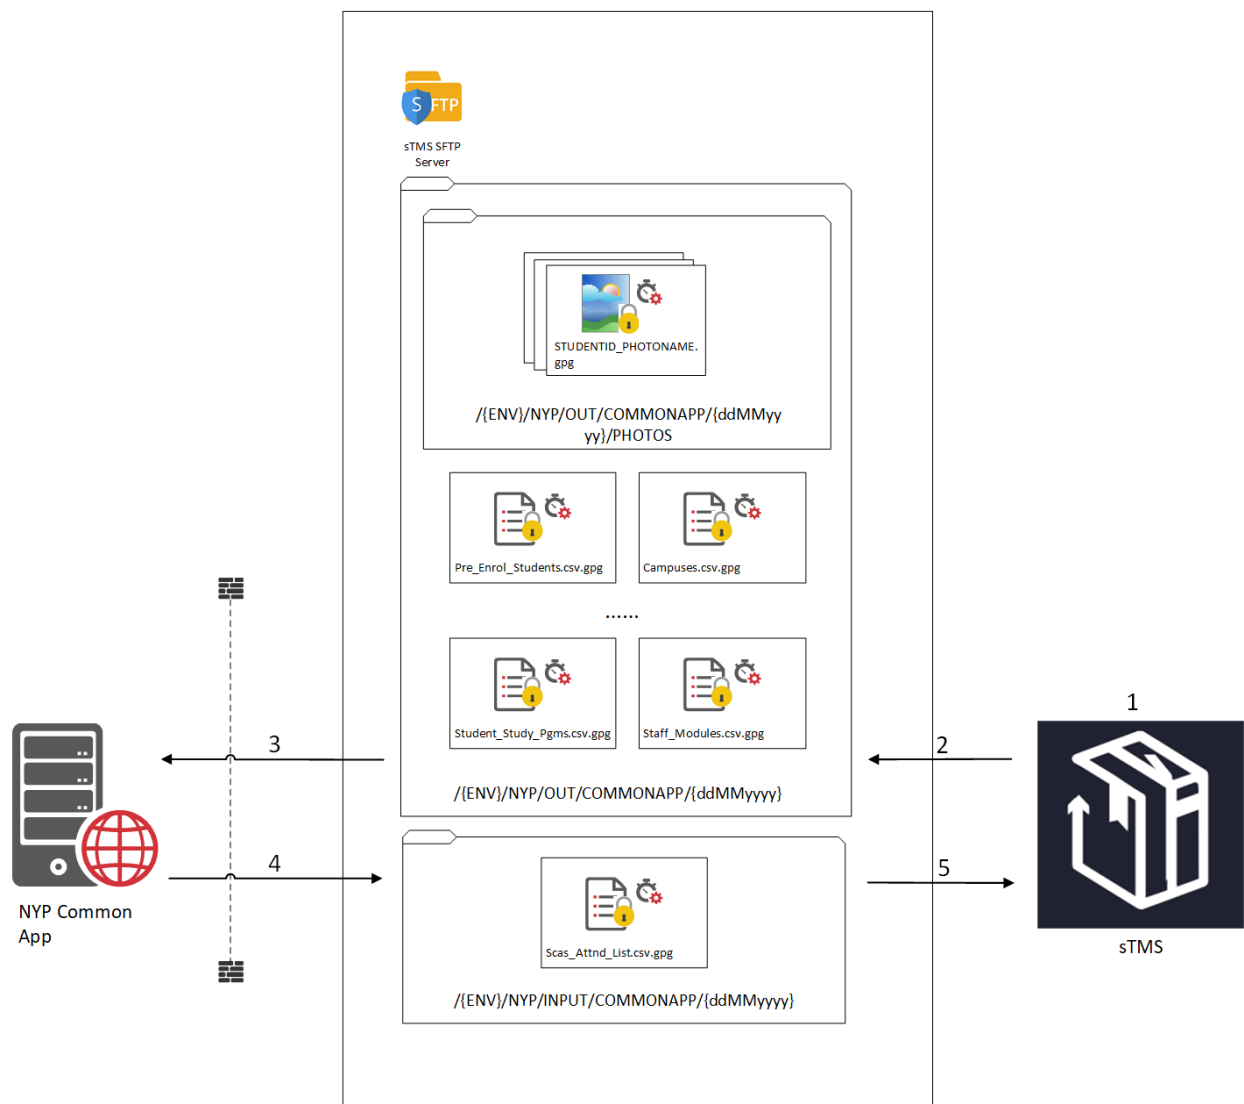

Given the complexity of NYP Common App interface and impactment on the SIT and UAT timeline, the Interface functional specification version 1.0 would be endorsed based on scope and conditions that would be agreed between NYP and AvePoint sTMS Project Team. sTMS shall support full/delta sync maximum of 35 tables data to NYP Common App via SFTP. Any update of the data field mapping after conditional sign-off will be included in version 1.1 or 1.2 etc.

2. Technical Overview

2.1 System Flow

There are 3 roles involved in the interface diagram.

- **NYP Common App:** Nanyang Polytechnic Common App.
- **sTMS SFTP Server:** A SFTP server hosted in Azure that stores encrypted files used for data exchange.
- **sTMS:** shared Training Management System

*The above system flow only shows some CSV files encryption with PGP protocol. For the interface file name of all NYP Common App CSV files, please refer to [2.2 Interface Design Summary](#).

SN	Description
1	sTMS generates NYP CET data CSV files based on institution, table name, modified time, and finds the corresponding student photos based on institution, modified time on a pre-defined schedule. For file generation rules can refer to 2.3. Business Rule
2	sTMS configures timer job to generate folders for different kind of resources: /{ENV}/NYP/OUT/COMMONAPP/{ddMMyyyy} for CSV files and check sum file, /{ENV}/NYP/OUT/COMMONAPP/{ddMMyyyy}/PHOTOS for student's photos. sTMS pushes CSV files and student photos to the corresponding folder after encryption with PGP protocol of NYP's external facing ftp server.
3	NYP Common App pulls these CSV files and student photos from sTMS SFTP server on demand.
4	NYP Common App configures timer job to generate folders /{ENV}/NYP/INPUT/COMMONAPP/{ddMMyyyy} in the sTMS SFTP server daily. NYP Common App pushes Scas_Attnnd_List data CSV files under {ddMMyyyy} folder after encryption with PGP protocol.
5	sTMS pulls this CSV file from sTMS SFTP server on demand.

Data Source System	shared Training Management System
Data Destination System	Nanyang Polytechnic Common App
Method	SFTP
File Path	/{ENV}/NYP/OUT/COMMONAPP/{ddMMyyyy} ENV: UAT, PROD
Encryption Method	PGP
Frequency	Daily Sync
Timing	The cut off time for changed data will be 00:00 am every day, timer job trigger timing is next day 01:00 am (TBC)
Folder Retention Policy	Folders under the /{ENV}/NYP/OUT/COMMONAPP are retained for a maximum of 30 days in the sTMS SFTP server, after this period the folders will be automatically deleted. NYP also can delete these folders after pulling out the files.

File Transfer Policy	sTMS shall transfer empty files with header info into sTMS SFTP server if there are no new records are added/updated in the table.
Possible Exception and Exception Handling	File loss or transfer failure due to sTMS internal exception. E.g., Timer service down, etc. Exception handling steps: • sTMS support team shall be informed by email of the transfer failure. • sTMS support team checks the relevant logs to troubleshoot the cause of the failure. • If the issue is due to the transfer files could not be found in the newly created SFTP folder: AP redeposits the files in the newly created corresponding SFTP folder. Data error. E.g., The length of the data field in sTMS exceeds the maximum length limit of the field in NYP common APP, The data type of field is a number, but it contains alphabet. Exception handling steps: • sTMS support team and NYP common APP admin shall be informed by email of the data error. • AP team checks the relevant logs and files to troubleshoot the cause of the failure. • AP informs NYP common APP system admin or CET user to edit the corresponding records. • The edited records will be sent to NYP common APP in the next job.

File Transfer Policy	NYP Common App shall transfer empty files with header info into sTMS SFTP server if there are no new records are added/updated in the table
Possible Exception and Exception Handling	File Transfer failure due to file not found or invalid data field. Exception handling steps: • NYP Common App vendor shall be informed of the job failure reason. • NYP Common App vendor to troubleshoot the cause of the failure. • If the issue is due to the transfer files could not be found in SFTP: NYP redeposits the files in sTMS SFTP.

2.3 Business Rule

CSV files generation rule

Table record trigger point: First-time full load data sync + Subsequent delta data sync.

Delta Data sync trigger point: Delta Data sync mode is record level. For example, if the COURSE_DURATION field in the Courses table is updated, all the data fields of this record in the Courses table will be sent to the NYP Common App.

Filter condition:

- Institution = NYP,
- The data fields in the table have changed,
- Modified datetime later than last successful sync datetime.
- The checksum information of each csv file will be aggregated into a checksum file.

Student photos generation rule

Trigger point: Student upload/ update student photos.

Filter condition:

- Institution = NYP,
- Student uploads/updates new student photo,
- Modified datetime later than last successful sync datetime,
- Users can identify student photo by the naming convention, E.g., STUDENTID_PHOTONAME.gpg.

Scas_AttnList (Attendance) Business Rule

1. Trigger point for Attendance table generation: Sessions would be synced when timetable is published. PRESENT_TAG in this table would be undefined when syncing from sTMS to NYP Common App.

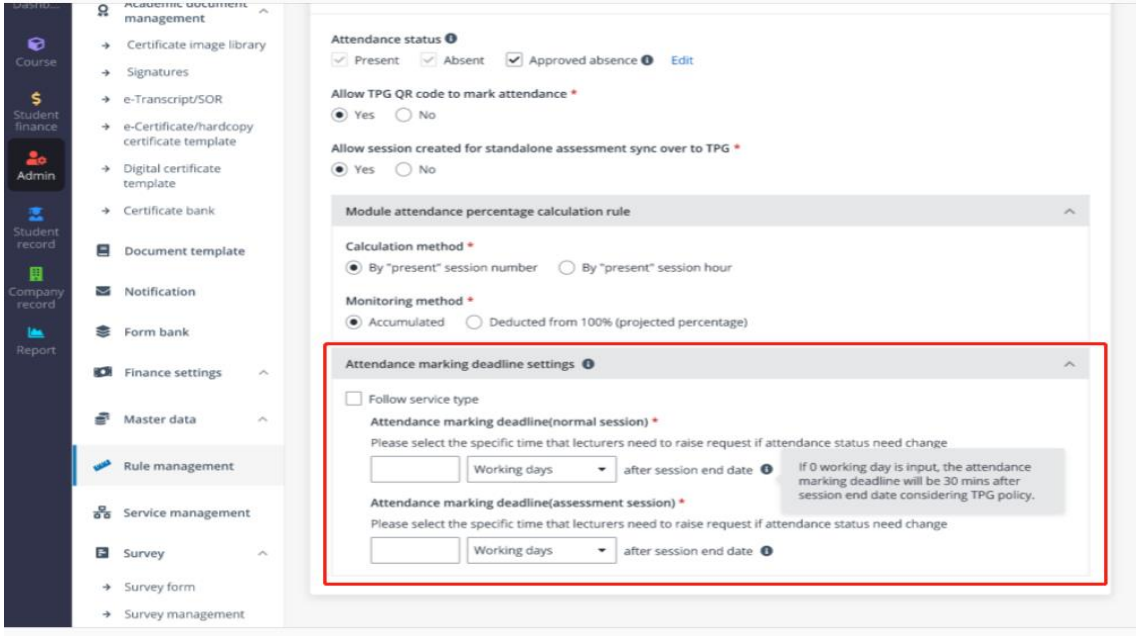

Filter condition:

- Institution = NYP,
 - The data fields in the table have changed,
 - Facilities with card reader*
 - Modified datetime later than last successful sync datetime
 - Card reader will be set up as an equipment during Facilities setup.
2. For data sending from NYP Common App to sTMS, the users are required to ensure that PRESENT_TAG in this table would be marked as present(Y)/absent(N). Any undefined values synced to sTMS (E.g. when lecturers did not activate the attendance taking for the facility) would remain as undefined and has to be followed up by session owners.
We also required unique time schedule from sTMS to be downloaded to the NYP Common Apps. For example, if there are lessons conducted in sTMS from 1800 to 2100 hrs for a group of 20 students, we will expect only one unique time_schedule (1800 to 2100 hrs) to be downloaded to NYP Common Apps instead of 20 records. All the records for this group of students should not be overlapping. For example, one student in the class having lesson from 1800 to 2100 hrs while another student class lesson is having lesson from 1900 to 2100 hrs. We need to handle if there is any last minute changes of the attendance list. The time schedule is required for the SCAS System

The users would be able to set the attendance marking deadline for normal session and assessment session under Rule Management and Service Management.

If the user uses Rule Management to setup the attendance marking deadline, the following would be considered:

- a. Before the number of working days set, the attendance record synced from NYP common app to sTMS would be allowed before the attendance marking deadline..
- b. After the number of working days set, there shall be no changes allowed from the syncing from NYP to sTMS. However, if attendance changes are required after setting, the user must raise service request on sTMS.

If the user uses Service Management to setup the attendance marking deadline, the following would be considered:

- a. Before the number of working days set, the user must raise a request in sTMS for any attendance change.
- b. After the number of working days set under Request cut-off time, there shall be no changes would be allowed.

3.1.2 Book_SNO Interface Fields

This table contains the facility booking information.

How sTMS handle the block booking for Timetable to NYP Facility Reservation System and for any subsequent changes ? We also need to be able to uniquely identified the booking records that were sent over from sTMS for any updates/deletion as the BOOK_SNO will be uniquely generated by NYP FRS System after checking for clashes

4.Assumption and Constraints

4.1Assumption

No.	Assumption

4.2 Constraints

No.	Constraints
1	If CSV file interface field has multiple values (E.g., Component, Certificate, Trainer, etc.), combine strings and separate them with ";"
2	Datetime values send via csv file default to Singapore Standard Time (SST). (UTC+08:00)
