

sTMS Interface Functional Specification

Temasek Polytechnic – Web Room Booking

Version 1.0

Document Version

Version	Effective Date	Summary of Changes	Created/ Updated By
0.1	10/08/2022	The initial version of TP Web Room Booking IFS	AvePoint
0.2	29/08/2022	Revised based on TP meeting feedback. • Rename source system to Chope a Facilities System • Remove API Interface Fields and attached TP Chope a Facility System IFS, add a description for whitelist setup and health check API • Update all workflow diagram • Update section 2 business overview • Add email notification template	AvePoint
0.3	07/09/2022	Revised based on TP email feedback. • Rename source system to Chope a Facility System • Change the description of section 1.2 Intended Audience • Add workaround if sTMS cannot get the TP room ID • Update session setup workflow diagram • Add Constraint for the splitting API call	AvePoint
0.4	21/09/2022	Revised based on TP meeting feedback. • Facility maintenance will be via calling Chop a facility API, add description in 2.1 and add facility field mapping in 3. Interface field. • Move Health Check API from 2.2.1 to 2.1, sTMS will continue to book the facility that failed during sTMS session published. • 2.2.1 Add screenshot for recurrence session configuration • 2.2.1 Add description: sTMS will not block the user to process the "Save" or "OK" operation during session setup. • 2.2.2 Change the Publish timetable trigger point.	AvePoint
0.5	22/09/2022	Revised based on TP meeting feedback. • 2.1 Add description and email template for the health check • Remove cc IT admin for daily operation details. • 3 Add remarks for The other status value of chope a facility will be mapped to Inactive. • 5 Add a sample whitelist file.	AvePoint
0.6	25/09/2022	Revised based on TP email feedback. • 2.2.1 Update the description and email template.	AvePoint

		2.2.2 Update the description: sTMS will recall the corresponding APIs to new/edit/cancel booking the facilities that failed due to API service down	
0.7	27/09/2022	Revised based on TP email feedback. 2.2.1 Update the description for the health check 5 Update the description for the API split calls	AvePoint
0.8	29/09/2022	Revised based on TP email feedback. 2.1 Update the API facility maintenance description 2.2.1 Add link in the email template. 2.2.3 Revised sTMS process	AvePoint
0.9	04/10/2022	Revised based on meeting feedback. 2.1 sTMS will send an email notification every hour to IT Admin if API service down. 2.1 Add common sessions description.	AvePoint
1.0	05/10/2022	Official version for acceptance and sign-off	AvePoint

1. Introduction

1.1 Purpose of this document

This Interface Functional Specification (IFS) is to provide the agreed baseline of communication requirement and detailed technical specification between the SaaS shared Training Management System (sTMS) and Temasek Polytechnic (TP) Chope a Facility System for room booking purposes. sTMS shall call TP Chope a Facility System API to query, new, edit and cancel facilities booking. sTMS will provide necessary exception handling when the API request failed.

1.2 Intended Audience

This document is used for system-to-system communication. The intended audiences are the technical and business stakeholders of sTMS and TP.

2. Business Overview

2.1 System Flow

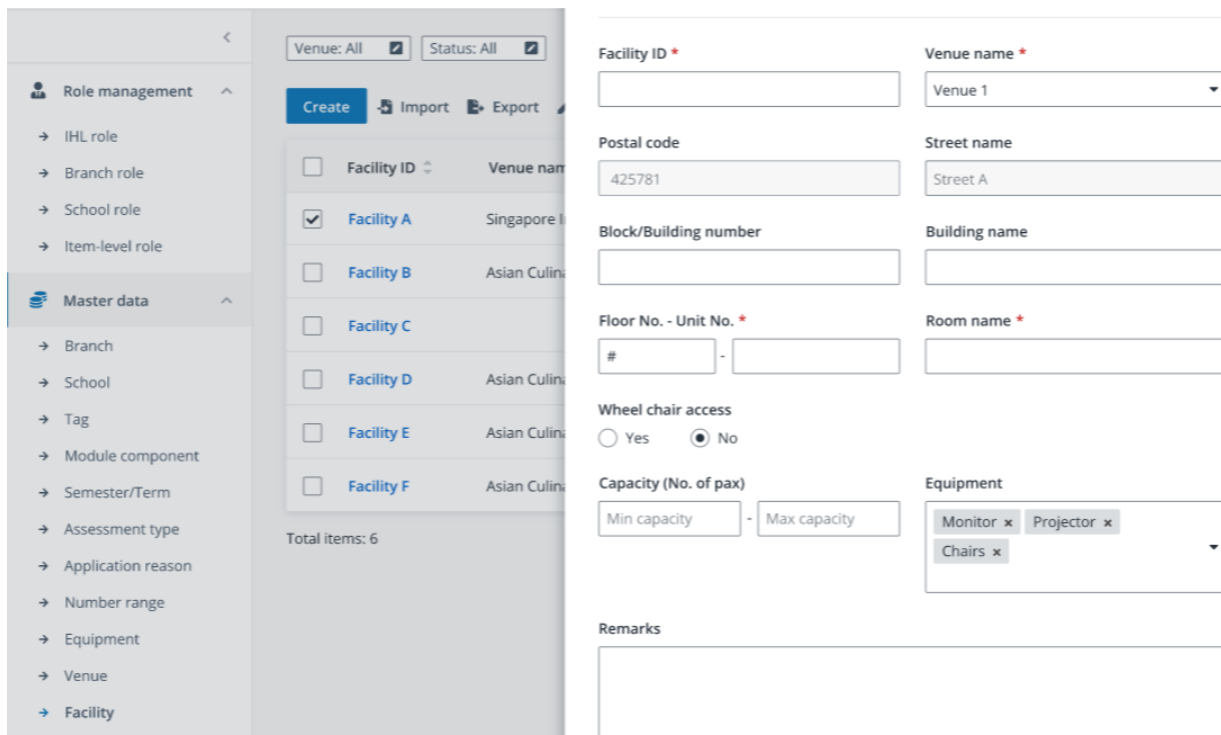

For timetabling setup process, please refer to sTMS stage2 FS Section 6 Timetabling for more details. sTMS provide an end-to-end solution to allow CET user to create session, configure session and publish them to the related students in student portal. The system will perform necessary clash check during the configuration process.

Under each class, the CET user will be able to configure some further detailed information for each session at the class level. CET users can assign a facility for the session, the options for the facility will be retrieved from master data. CET users can set up the session date and time. The system will provide the clash check based on the CET user's input, but the system will not block the user to proceed.

Kindly refer to the prototype here: [MOE Course Session Setup](#)

sTMS no need to call any API of the TP Chope a Facility System if the facilities for the user to create, edit and publish sessions are whitelisted. sTMS will store the whitelist in the system as a configuration file provided by TP. If the facility whitelist needs to be changed, CET user can raise a ticket to sTMS support team for manual updates. Please refer to [5. Appendix](#) for the whitelist file format.

sTMS shall call the "Query Eligible Facilities" API to create and edit facilities in sTMS daily. Class session facility dropdown list should include all eligible facilities in "Active" status plus all whitelist facilities. Please refer to [3. Interface Field](#) for how "Query Eligible Facilities" response map to sTMS facility fields. sTMS will update facility records based on what eligible API returned, and not to touch any other facilities not covered by eligible API. When CET user update a facility which covered under eligible API, the changes can be saved at that time but will be overwritten by the daily call API returned result.

Remarks

sTMS shall call the "Health Check" API to check the room booking API status hourly. If sTMS detects that TP Choep a Facility System API has recovered, sTMS will recall the corresponding APIs to new/edit/cancel booking the facilities that failed due to API service down during session setup, publish timetable and edit published timetable. sTMS will book these facilities in order based on the earliest session start time, so that more urgent facility booking sessions will be tried first. Booking failure due to Choep a facility API not available will continually retried on hourly health check job report API available until the associated session has started.

If sTMS detects that TP Choep a Facility System API service down, sTMS will hourly send an email notification to the TP IT admin until the API are recovered.

Email Notification Template

API no response/ API recovered

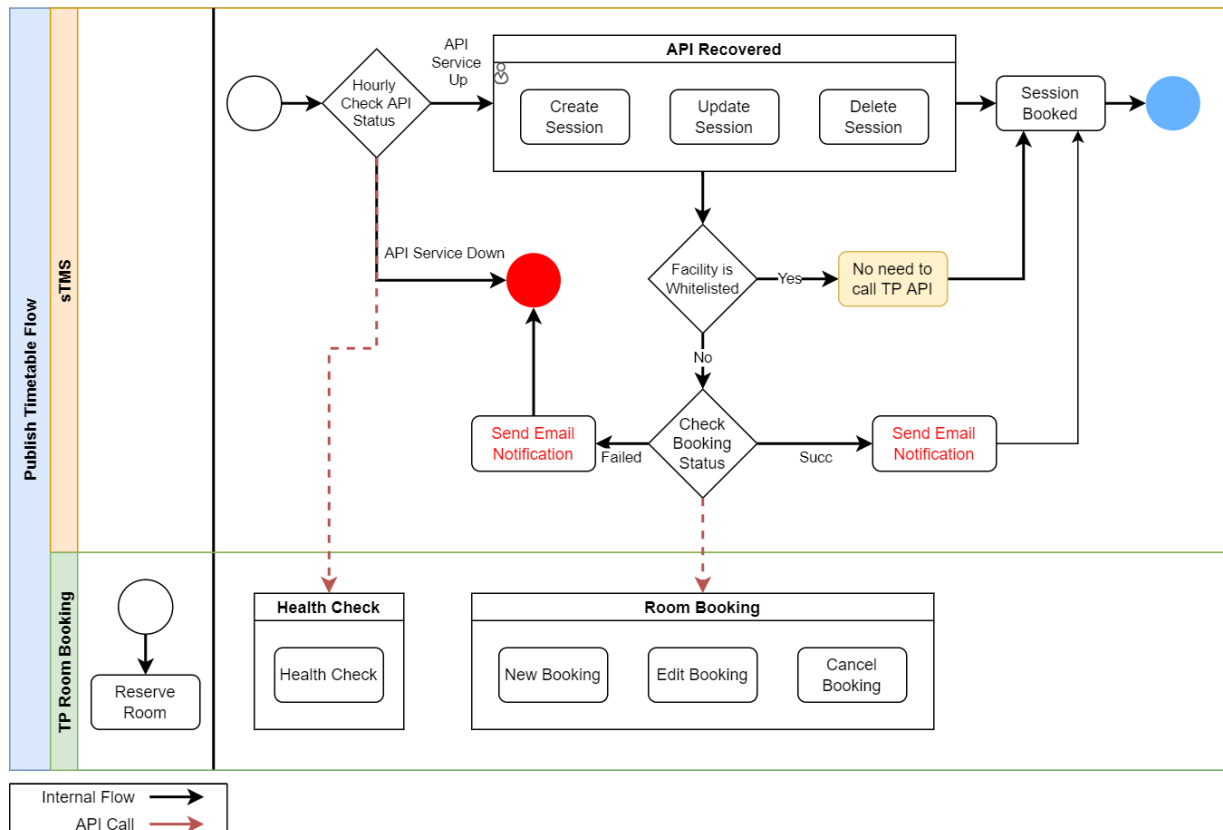

Email Subject: TP Choep a Facility System API service down.

Dear TP IT Admin,

TP Choep a Facility System API service down. Please contact the sTMS support team if you need further assistance.

Thank you.

For the health check trigger point please refer to the below diagram.

For common sessions setup, sTMS will not call Chope a Facility API to book the facility, and sTMS will not have any conflict and forbid CET user to publish the timetable.

When CET user modify one of the common sessions, the change will be applied for all the sessions that connected together and will call Chope a Facility API to update the booking details.

2.2 API Trigger Point

2.2.1 Session Setup

sTMS will not block the user to process the "Save" or "OK" operation during session setup. sTMS will implement an asynchronous API job, and users can continue to process the pages without waiting for the API to return results.

sTMS shall ad-hoc call Health Check API if system needs new/edit/cancel booking facilities. If the health check status is "error", sTMS will not call the APIs and wait for the APIs to recover. If the health check status is "ok", sTMS will call the corresponding APIs to new/edit/cancel booking the facilities.

For the API trigger point during the session setup please refer to the below diagram.

Create Session and Edit Session (New Booking and Edit Booking)

Under each class session, the CET user will be able to configure the facility, session start time and session end time. sTMS also allow CET user to create/ edit session via file import function. Upon CET user fill in the required fields and click the "Save" or "OK" button, if the facility is not in sTMS whitelist, sTMS will real-time call New Booking API or Edit Booking API to book the corresponding facilities.

OK

sTMS will call the New Booking API or the Edit Booking API with session start time, session end time, room ID, etc. to book the corresponding facilities in TP Chope a Facility System.

Please refer to the following table for sTMS response processing.

TP Chope a Facility System Response	sTMS Process
API no response (Network issues or hosting system under maintenance or API service down)	sTMS will ad-hoc call Health Check API to check the APIs' status. If the status is "error", sTMS will stop calling APIs, send an email notification to the CET user and wait for the APIs to recover.
API recovered	sTMS will recall the corresponding APIs to new/edit booking the facilities that failed due to API service down
Response with booking status is true	Booking successful, no further processing required.

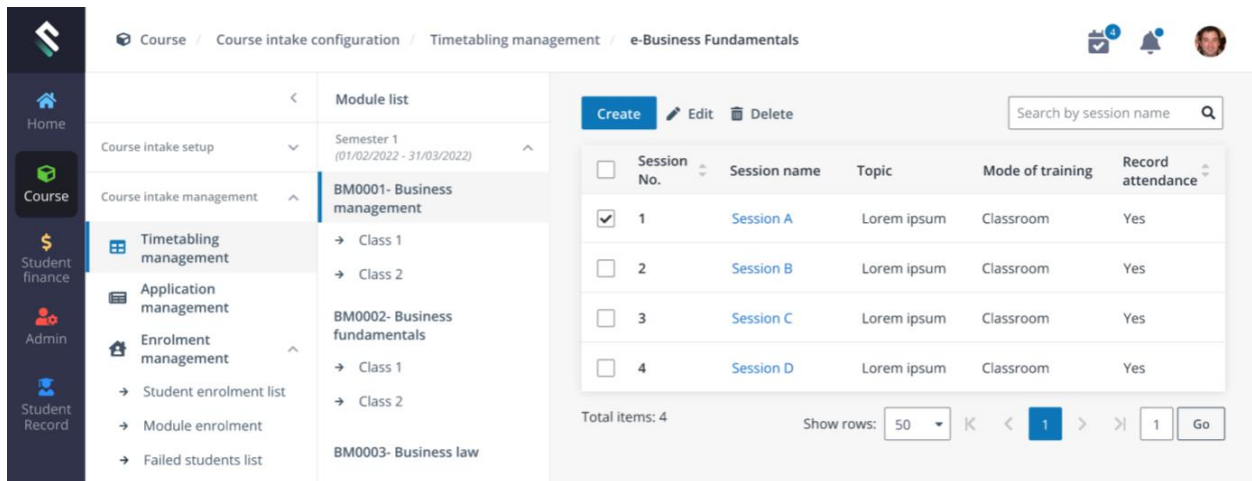

Response with booking status is false	Booking failed, send an email notification to CET user. CET user will retry and handle conflicts before the timetable publish.
Response with booking code is 200	Edit Booking successful, no further processing required.
Response with booking code is 400	Edit booking failed, send an email notification to CET user. CET user will retry and handle conflicts before the timetable publish.
Response with booking status is true or booking code is 200 after APIs are recovered	Booking successful, send an email notification to the CET user.

Email Notification Template

If the CET user new/edit booking multiple facilities at the same time, sTMS will only send one email notification to the CET user who configured the timetabling with the booking details.

The "Message" in the email notification will be retrieved from TP Chope a Facility System API response body or defaults to "TP Chope a Facility System API no response."

The "Link" in the email notification can redirect to sTMS timetabling management page, user can select and edit class sessions based on the email notification.

API no response or response with booking status is false or booking code is 400

Email Subject: The <Action> Booking Process Failed

Dear TP CET Admin,

The <Action> booking process failed. Please contact the sTMS support team if you need further assistance.

Failed to <Action> booking for the following facilities:

Delete

Please refer to the following table for sTMS response processing.

TP Chope a Facility System Response	sTMS Process
API no response (Network issues or hosting system under maintenance or API service down)	sTMS will ad-hoc call Health Check API to check the APIs' status. If the status is "error", sTMS will stop calling API, send an email notification to the CET user and wait for the APIs to recover.
API recovered	sTMS will recall the corresponding APIs to cancel booking the facilities that failed due to API service down
Have response with the booking ID and message	Cancel booking successful, no further processing required
Response with booking ID and message after APIs are recovered	Cancel booking successful, send an email notification to CET user

Email Notification Template

If the CET user cancels booking multiple facilities at the same time, sTMS will only send one email notification to the CET user who configured the timetabling with the booking details.

The "Message" in the email notification defaults to "TP Chope a Facility System API no response."

API no response

Email Subject: The Cancel Booking Process Failed.

Dear TP CET Admin,

The cancel booking process failed. Please contact the sTMS support team if you need further assistance.

Failed to cancel the booking for the following facilities:

Facility Id	Session Start Time	Session End Time	Message
01A-01-221	12/05/2022 14:00:00	12/05/2022 16:00:00	TP Chope a Facility System API no response.
01A-01-222	12/05/2022 14:00:00	12/05/2022 16:00:00	TP Chope a Facility System API no response.

Thank you.

Response with booking ID and message after APIs are recovered

Email Subject: The Cancel Booking Process Successful.

Dear TP CET Admin,

The cancel booking process was successful, and TP Chope a Facility System APIs were recovered.

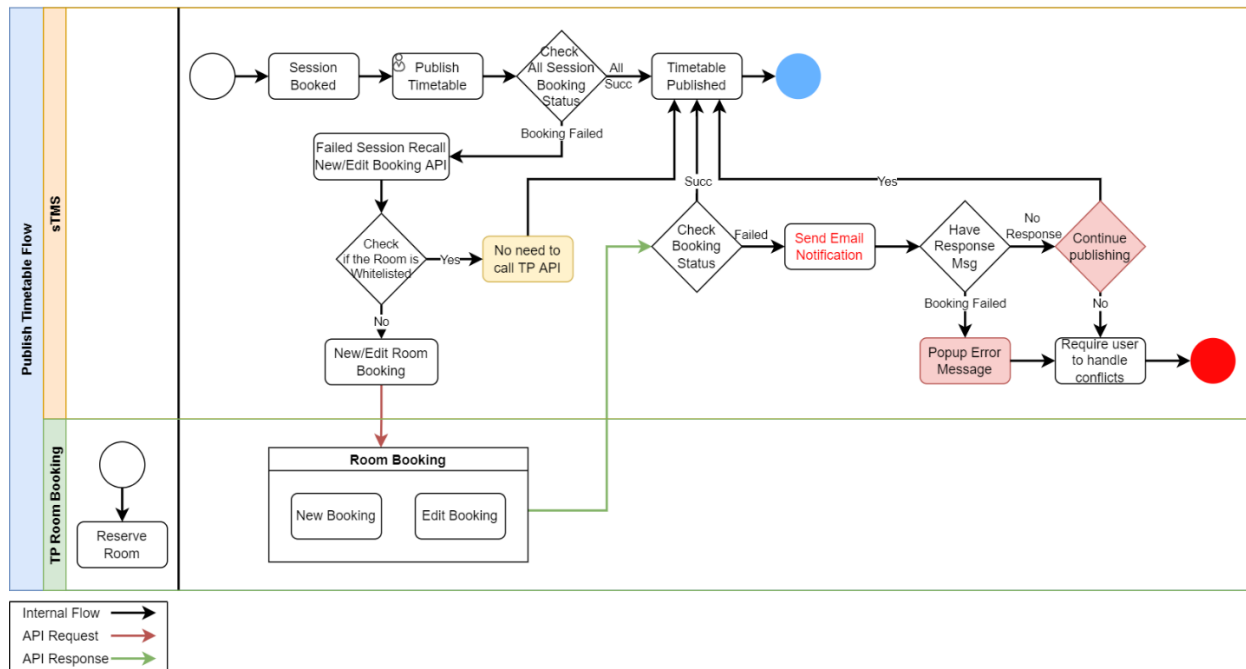

Successfully cancel the booking for the following facilities:

Facility Id	Session Start Time	Session End Time
01A-01-221	12/05/2022 14:00:00	12/05/2022 16:00:00
01A-01-222	12/05/2022 14:00:00	12/05/2022 16:00:00

Thank you.

2.2.2 Publish Timetable

For the API trigger point during the publish timetable please refer to the diagram below.

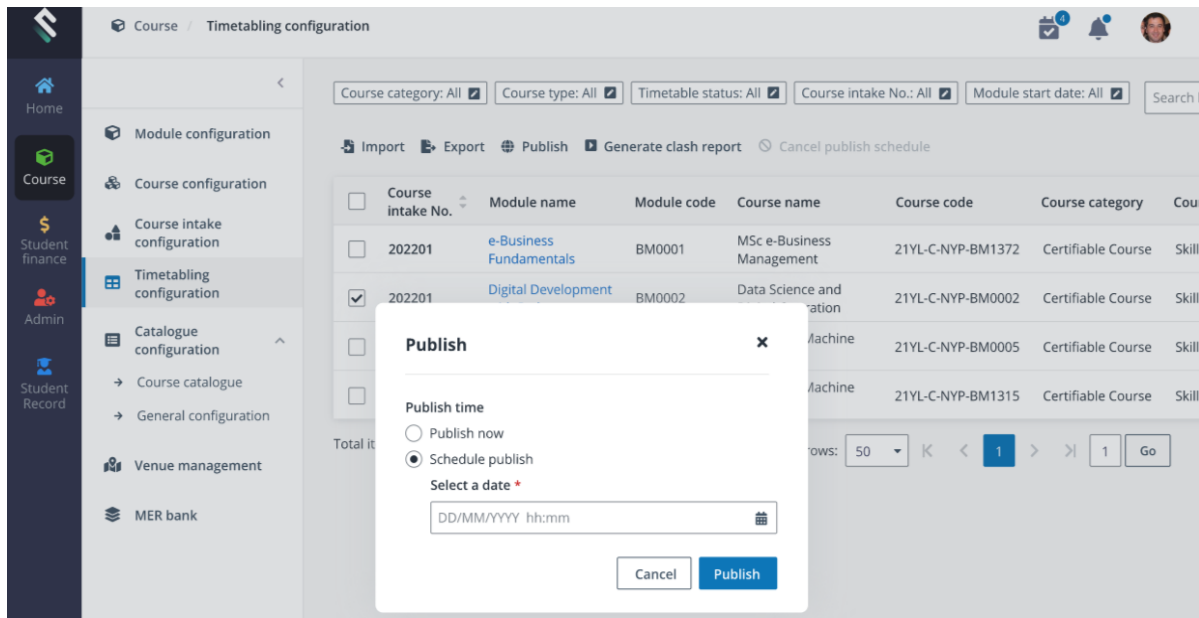

After the session has been set up, the CET user will be able to publish them to the student portal and sTMS will publish the timetabling information on the module level. If there are multiple classes under the module, all timetabling information will be published together. CET users can publish right on time or set the target date to schedule publishing.

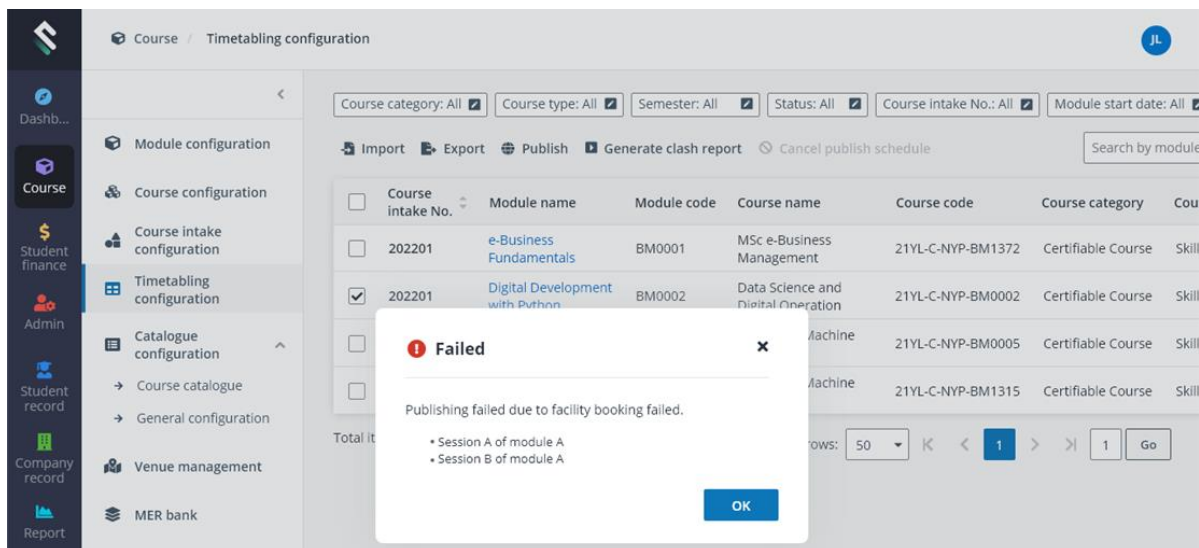

Upon the CET user selecting course intakes and clicking the “Publish” button, sTMS will check on the booking status for all the facilities in the module session. The timetable can be published successfully by the CET user if all facilities booking successfully. If some facility booking failed, sTMS will send an email notification to the CET user and check the API response message for a different workaround.

Leaving Configuration

Course intake No.	Module name	Module code	Course name	Course code	Course category	Course type
☐ TP-0701ca-220234	math 3	math003	0701ca	0701ca	API Course Student Category1	API Course Student type02
☐ TP-0701ca-220235	math 3	math003	0701ca	0701ca	API Course Student Category1	API Course Student type02
☐ TP-0701ca-220235	math 33	math033	0701ca	0701ca	API Course Student Category1	API Course Student type02

If the API call response with booking status is false or booking code is 400 (conflicts error) from TP Chope a Facility System, sTMS will pop up an error message to indicate which session has error and forbid CET user to publish the timetable. Users have to handle the conflicts before publishing the timetable.

If API calls no response from TP Chope a Facility System, sTMS will pop-up a warning message to let CET user choose to proceed or amend. sTMS will not restrain the user from proceeding further and sTMS will recall TP Chope a Facility System API to new/edit/cancel booking the facilities that failed due to API service down during the publishing timetable stage. CET users must ensure the corresponding facilities are available at that time.

Warning

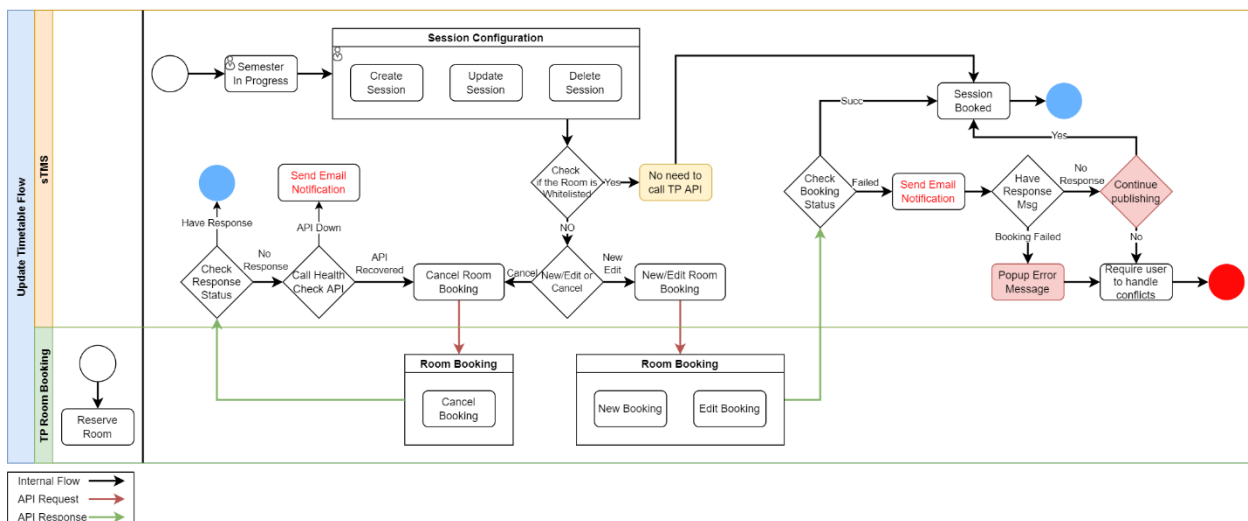

The booking process failed, no response from TP Chope a Facilities System, continue to publish?

Cancel OK

2.2.3 Edit Published Timetable

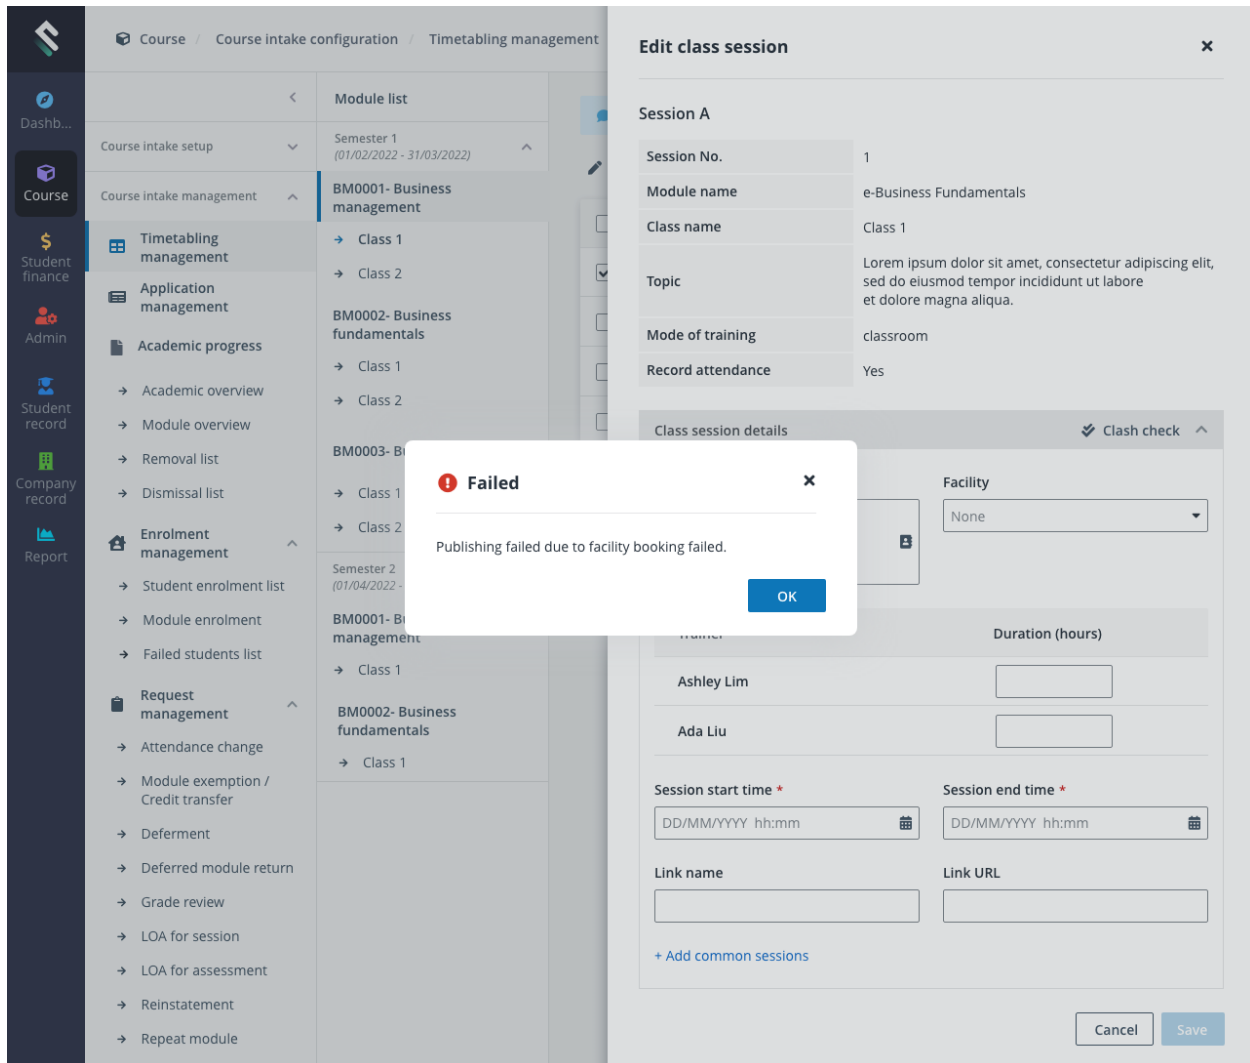

After the timetable is published, CET user is also able to create, edit and delete the class session, the trigger point and email notification template follow [2.2.1 Session Setup](#).

For the API trigger point and business flow after the timetable is published, please refer to the below diagram.

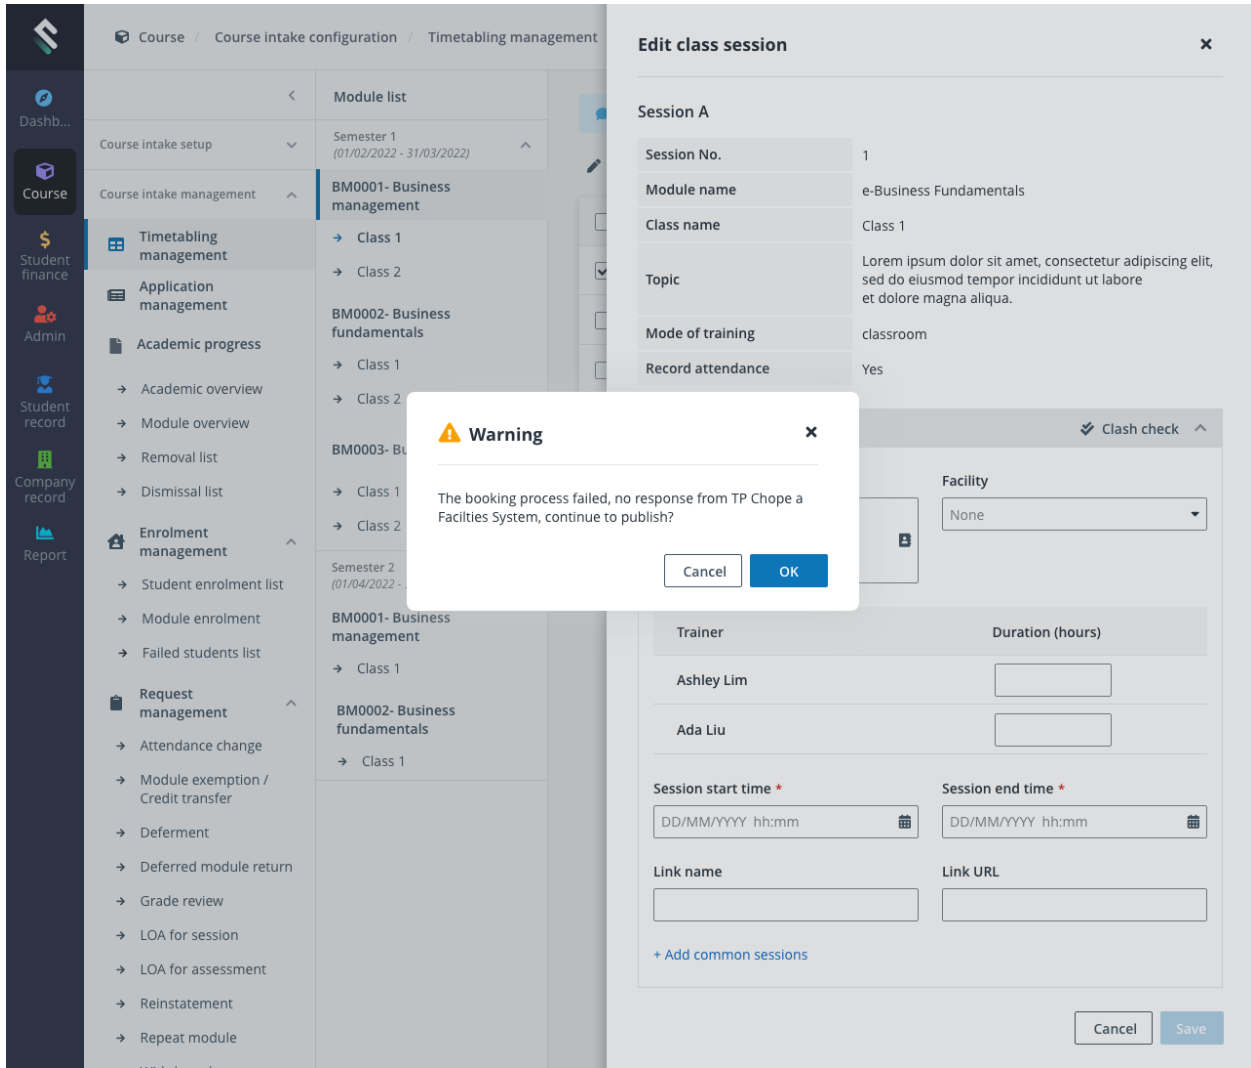

Create Session and Edit Session (New Booking and Edit Booking)

If the CET user new/edit booking facilities unsuccessful, and the API response with booking status is false or booking code is 400 (conflicts error), sTMS will send an email notification and pop-up an error message to forbid CET user to create/edit the class session. For the pop-up error message please refer to the diagram below.

If the CET user new/edit booking facilities are unsuccessful due to API no response, sTMS will send an email notification to the CET user and pop up a warning message, CET user can choose to proceed or amend. For the pop-up warning message please refer to the below diagram.

Please refer to the table as follow for the sTMS response processing.

TP Chope a Facility System Response	sTMS Process
API no response (Network issues or hosting system under maintenance or API service down)	sTMS send an email notification to the CET user and pop-up a warning message to let the CET user decide whether to proceed further.
API recovered	If the user has class sessions that force publish due to API no response, sTMS will recall the corresponding APIs to book the facilities that failed due to API service down.
Response with booking status is true or booking code is 200	Booking successful, no further processing required.
Response with booking status is false or booking code is 400 (conflicts error)	Booking failed, pop-up error message and forbid CET user to continue publishing the class session and send an email notification to CET user.
Response with booking status is true or booking code is 200 after APIs are recovered	Booking successful, send an email notification to the CET user.

Cancel Session (Cancel Booking)

sTMS will not block user to cancel session after publishing the timetable, please refer to the table as follow for sTMS response processing.

TP Chope a Facility System Response	sTMS Process
API no response (Network issues or hosting system under maintenance or API service down)	sTMS will ad-hoc call Health Check API to check the APIs' status. If the status is "error", sTMS will stop calling API and send an email notification to the CET user.
API recovered	If the user has class sessions that force publish due to API no response, sTMS will recall the corresponding APIs to cancel booking the facilities that failed due to API service down.
Have response with booking ID and message	Cancel booking successful, no further processing required.
Have response with booking ID and message after APIs are recovered	Cancel booking successful, send an email notification to the CET user.

3. Interface Field

Facility Setup

sTMS Field Name	Chope a Facility Field Name	Description	Remarks
Facility ID	location	Define the facility ID of the facility.	Sample value: 01A-01-221
Venue name	-	-	Default to Temasek Polytechnic
Postal code	-	-	Default to 529757
Street name	-	-	Default to 21 Tampines Ave 1
Block/Building number	location	Define the block/building number of the facility	Split Chope's 'location' field by '-' character and return first part. Sample value: 01A
Building name	-	-	Default to Null
Floor No. – Unit No.	location	Define the floor No. and unit No. of the facility.	Split Chope's 'location' field by '-' character and return second and third part. Sample value: 01-221
Room name	name	Define the room name of the facility.	Sample value: Sports Complex
Wheel chair access	-	-	Default to No
Capacity (No. of pax)	max_capacity	Define the capacity of the facility.	Sample value: 50
Equipment	-	-	Default to Null
Remarks	-	-	Default to Null
Status	status	Display the status of the facility.	Value list: Active, Inactive. The other status value of chope a facility will be mapped to Inactive.

4. Constraints

No.	Constraints
1	If a specific facility of TP is whitelisted by sTMS, no need to call TP Chope a Facility System API to book.
2	sTMS will follow TP Chope a Facility System API Specifications, use subscription/cert and JWE to ensure the security for authentication.
3	Maximum of 20 booking requests at a time. If more than 20 facility booking requests need to be booked at the same time, sTMS will split these requests into multiple groups (20 booking requests per group) for the API calls, and start calling Chopa a facility API to book facilities asynchronously for each group. sTMS will report booking failure when API calls for all the requests returned, and only one email notification will be sent for this particular "Save" operation to the CET user who configured the timetabling with the booking details.

5. Appendix
