1. Introduction

ITE offers courses and registers students on a modular basis. There are flexible combinations available in terms of course offerings and different pathways to stack up to a full qualification. Unlike Polytechnics, which administers such cases as full-qualification intakes, ITE prefers to build in a Stackable Course module into the STEP system to accommodate flexibility. This allows students to enrol in just one module, a few modules, or complete all the modules that stack up to a Full Qualification.

For students or applicants who are not interested in getting the full qualification certificate, they can simply register for the specific modules they are keen to learn. Upon completion of each module or cluster of modules, they will receive a module cert or a modular certificate. On the other hand, individuals who aspire to obtain the full qualification certificate must complete all the required modules within the candidature period. The system will

track the completed modules and issue the student a full qualification certificate when he meets the certification requirement.

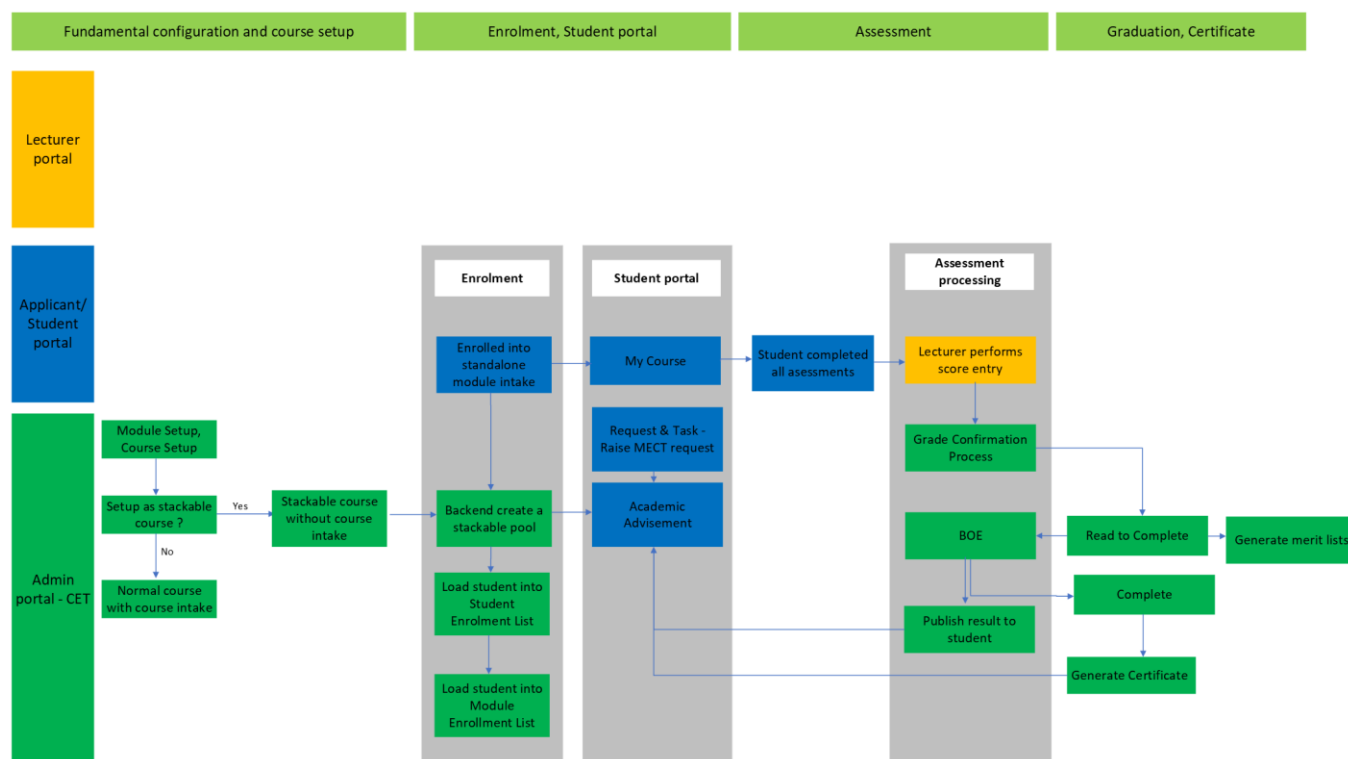

In short, stackable courses provide the flexibility to pursue education on a modular basis. Once students or applicants successfully complete all the required modules or obtain the corresponding modular certificates within the candidature period, the system will compute and issue a full qualification certificate to them.

To capture and monitor the progress of stackable course, the concept of a "Stackable pool" is introduced. The stackable pool can be considered as a big pool that capture a set of modular courses or certifications that can be combined or "stacked" to build a broader qualification. Students can choose from this pool of courses to customize their education based on their goals and needs.

IHLs which register students into full qualification (FQ) courses will not be using the stackable pool to track and graduate students.

IHLs who are using the stackable pool to track and graduate students must ensure all the required modules that stack up to a full qualification are offered even in different semesters and terms for registration.

1.1 Function Overview

Current finance-related processes will not be affected by the solution.

2. Module Equivalence

2.1 Background Information

As described in FS 1 and FS 3, module equivalence is set up in the module configuration section. Equivalent modules signify the sufficient overlap in modules content, enabling students to request module exemption and credit transfer. It's important to note that the equivalency is unidirectional. In other words, if module 2 is deemed equivalent to module 6, it does not imply that module 6 is equivalent to module 2.

As depicted in the table below, there are several relationships between modules:

Case	Relationship	Description	Example	System support
1	1: 1	Another module will be offered in an original module's place, and they will be set as equivalent	M2 -> M6, module 2 is equivalent to module 6	Yes
2	1: N	An original module will be split into two or more modules, which will then be set as equivalent	M3 -> M7+M8, module 3 is equivalent to the combination of module 7 and module 8	Yes
3	N: 1	The combination of two or more modules is equal to a new module, which will be set as equivalent	M4+M5 -> M9, the combination of module 4 and module 5 is equivalent to module 9	No

In line with current system design, we set the module equivalences on old modules. For the example in case 1, we set the equivalences on module 2. For the example in case 2, we set the equivalences on module 3. However, the system cannot support the example in case 3 by setting up the equivalences on module 4 and module 5. In short, the system can only recognize the equivalent modules in examples corresponding to case 1 and case 2.

2.2 Modules Mapping Rules in Stackable Course

In this section, we will elucidate the implementation of equivalent modules mapping within stackable courses. Please note that the system will fetch equivalency information from the latest module version, and the order of equivalencies is significant as the system prioritize first matching equivalent module. For example, module 1 is

equivalent to module 2 or module 3, denoted as module 1 -> (module 2 or module 3), when applying the auto-mapping for module 1, we will stop the scanning when module 2 is successfully matched.

2.2.1 Among different stackable course versions

In a stackable course, students can be moved among different stackable course versions. Before the system automatically move students from an old stackable course version to a new stackable course version, the system will iterate all modules taken by a student in the old stackable course version, and check whether these modules can be mapped to modules in the new stackable course version. Here is an example:

Case	Version 1	Version 2	Equivalency	Modules Mapping	Result
1	Module 1	Module 1	M1 = M1	Same modules, apply auto mapping	Module 1
2	Module 2	Module 6	M2* -> M6	1:1 equivalent module, apply auto mapping	Credit transfer
3	Module 3	Module 7	M3* -> M7+M8	1: N equivalent modules, apply auto mapping	Module exemption
		Module 8			
4	Module 4	Module 9	M4+M5 -> M9	N:1 equivalent module, no auto mapping, need manual MECT process	Module exemption
	Module 5				

Please note that an asterisk (*) signifies setting the equivalences on this module.

As shown in the table above, for case 1, case 2 and case 3, the system will automatically map the modules between two stackable course versions and apply credit transfer and module exemption correspondingly. However, for case 4, users need to apply the MECT process manually.

2.2.2 From modular course to stackable course

When adding a student's modular enrolment to a stackable pool, the system will scan through all the modules within the respective stackable course version. It will verify whether the student has enrolled in the same module before; if not, the system will then check if the student has successfully completed equivalent modules.

Here is an example:

Case	Stackable Course	Equivalency	Modules Mapping	Result
1	Module 1	M1 = M1	If the student has enrolled in module 1, the system will load module 1 directly	Module 1
2	Module 2	M2* -> M6	If the student has not enrolled in module 2, the system will load completed module 6	Credit transfer
3	Module 3	M3* -> M7+M8	If the student has not enrolled in module 3, the system will load completed module 7 and module 8	Module exemption

Please note that an asterisk (*) signifies setting the equivalences on this module.

3. Course Setup

3.1 Manage Course

3.1.1 View Course Listing Page

Refer to the prototype: [Course Listing Page](#)

After user has done setting up Stackable course in Course Setup (introduce further in 3.1.2 Course configuration “Create course” page). Stackable courses will be displayed on the Course Listing page.

Once a stackable course version is activated, system will not allow further changes on course structure. If user click “Edit” button, a Pop-up will be prompted to let user create a new stackable course version if they want to edit the course structure. Same as current process, user can edit course current version if they do not need to update the course structure.

This Course Listing Page contains following search box, filters, buttons, and columns:

Filter & Search	Description
Filters: School, Branch, Collaborative course, Version, Stackable course, Course category, Course type, Effective from, Effective to, Course owner, Status	- By clicking the edit icon, users can change the selected options, and the records shown will be changed to only matched records. - The default filter value for School, Branch, Collaborative course, Version, Stackable

	course, Course category, Course type, Effective from, Course owner, Status is All. - The default filter value for Effective to is [Today –].
Search	- Can search for the course either using Course name or Course code.

Button	Description
Create	- Upon clicking, the system will route the users to Create Course Step 1-General Information. See prototype.
Import	- Upon clicking, the system opens import wizard to allow users to upload an excel file to create course in bulk.
Export	- Upon clicking, the system exports the course configuration into an excel file to download course information in bulk.
Edit	Depends on the status of the course version: - For “Draft”, “Pending fee setup” & “Pending worktag setup”, “Pending activation” status: upon clicking, the system opens the Edit course page. - For “Active” & “Scheduled for activation” status: upon clicking, the system opens the Edit popup, asking user to create a new version of the course and edit. - For “Inactive” status: “Edit” button is disabled.
Copy	- Available when a single course version is selected. - Upon clicking, the system opens Course Creation Page with information copied from the selected course version.
Activate	- Available when course version(s) in “Pending activation” status is selected. - Upon clicking, the system will activate the selected course versions and change their status into “Activated” or “Scheduled for activation “.
Deactivate	- Available when a single course that is in “Active” status is selected. - Upon clicking, the system opens a confirmation pop-up with Deactivate reason textbox. - Upon confirmation, the system will Deactivate the selected course for all its versions and change their status into “Inactive”. Note: Deactivation is to phase out a course and will only impact future course setup. The downstream processing such as assessment, graduation, transcript of ongoing intakes will not be affected.
Assign owners	- Available when a single course is selected. - Upon clicking, the system opens a “Assign owner” panel for user to assign specific course owner to this course.
Version history	- Available when a single course is selected. - Upon clicking, the system opens a “Version history” panel to display all versions of a course.
Delete	- Available when course version(s) in “Draft” or “Pending fee setup” or “Pending worktag” or “Pending activation” status is selected. - Upon clicking, the system opens confirmation pop-up. Upon confirmation, the system deletes the selected course version(s).

Below are the data fields in the course listing pages:

Column	Sorting	Description
--------	---------	-------------

Course name	Sortable	Display the current course name.
Course code	Sortable	Display the current course code.
Collaborative course	Not sortable	Value list: Non-collaborative course, Collaborative course as participating IHL, Collaborative course as coordinating IHL - For stackable course, it will only show as non-collaborative course.
Version	Sortable	Display the latest version of the course.
Stackable course	Not sortable	- Value list: Yes, No. - The value will be “Yes” if Setup stackable course is ticked. Else, the value will be “No”. For course that will not offered as a whole intake, or will offered as a whole intake, but also offered on PDC/MC/module level, tick this checkbox on FQ course level. For course that will only offered as PDC/MC or modular level, tick this checkbox on FQ level and no need to tick it on PDC/MC or module level. After stackable course solution deployed, CET user will be able to use import function to batch edit course as stackable course. For course already activated, after user check the stackable course checkbox via edit or import function, system will create the stackable pool. For course not been activated, after user check the stackable course checkbox and activate the course, system will create the stackable pool. Course status will not be impact if user only check the stackable course checkbox during editing or import function. System does not allow user to uncheck the stackable course checkbox for active course.
Course category	Not sortable	Display the current course category.
Course type	Not sortable	Display the current course type.
Effective from	Sortable	Display the effective start date of the current course.
Effective to	Sortable	Display the effective end date of the current course.
Course owners	Not sortable	Display the current course owner(s).
Status	Not sortable	- Value list: Draft, Pending fee setup, Pending worktag, Pending activation, Scheduled for activation, Inactive, Active. - Only courses with active versions can be used when creating Course Intake. - Once the stackable course is being ticked and activated, the status will be “Active”.

3.1.2 Course configuration “Create course” page

Refer to the prototype: [Course configuration “Create course” page](#)

Stackable courses will be distinguished from normal courses by the checkbox “Set up stackable course”. Once ticked, the course will be identified as a stackable course after being activated.

Step 1. General information

1. On the general information page, the system will add a new checkbox “Set up stackable course”. To facilitate understanding, there will be a tooltip icon to explain the purpose of the checkbox: Once the course is activated, a corresponding stackable course will be created, and this setting cannot be changed in current course version once activated. Unless there is a new course version created, the user can change the setting before course activation.
2. Once ticked, the course will be identified as a stackable course after being activated.
3. Once the course is activated, the “Set up stackable course” checkbox will be greyed out which means it cannot be edited in the current course version.
4. The rest remains the same. For further explanation, please refer to Stage 1 FS 6.3.2.1 General Information.

Step 2. Course Details

1. After user has ticked to setup as a stackable course, selection of “Add programme pathway” will be disabled as users can only select Normal course pathway when setting up stackable courses in Course Structure tab.
2. Stackable courses do not accommodate both collaborative courses and programme courses since they are configured using a Programme pathway. The rationale behind is that a programme course comprises multiple course versions, which is not compatible with the structure of stackable courses.
3. On the Course details page under Course structure section, users need to select “Add normal course pathway” and add all the relevant modules that stack up to a stackable course.
4. The rest remains the same. For further explanation, please refer to Stage 1 FS 6.3.2.2 Course Details.

Step 3. Course Fee

1. Users need to set up the course rate, grant and subsidy, supplementary fee, and discount if any for each of the modules to complete the stackable course setup.
2. The rest remains the same. For further explanation, please refer to Stage 1 FS 6.3.2.3 Course Fee.

Step 4. Worktags

1. Users with the role of “Accounting Entries Admin” will be able to configure worktags which intended for various transactions type such as billing or receipts of funds.
2. The rest remains the same. For further explanation, please refer to Stage 3 FS 12.2 Workday 2.2 Manage Course Intake Integration.

3.2 Manage Stackable Pool

3.2.1 View Stackable Pool Listing Page

Refer to the prototype: [Stackable Pool Listing Page](#)

Once the user has ticked the checkbox and activated the stackable course, system will create a 'Stackable Pool.' Unlike normal course intakes, students cannot enrol in this stackable pool directly. Instead, students still need to follow the current enrolment process in the module (auto or manual enrol), and the system will place them in the stackable pool if the module is one of the stackable courses.

To distinguish Stackable course intake, the system will separate normal course intake and stackable pool into two different tabs.

First tab: The Course Intake Listing Page for normal course intake remains the same.

Second tab: The Course Intake Listing Page for the Stackable pool tab contains following search box, filters and buttons:

Filter & Search	Description
Filters: Course category, Course type, Branch, School, Status	- By clicking the edit icon, users can change the selected options, and the records shown will be changed to only matched records. - The default filter value for Course category, Course type, Branch, School and Status is All.
Search	- Can search for the course either using Course name or Course code.

Button	Description
Export	- Upon clicking, the system exports the stackable pool information into an excel file in bulk.
Deactivate	- Once the stackable pool is deactivated, the stackable pool status will be "Inactive". - The system will stop loading the new student to student enrolment list, but it will still load the module enrolment list for the current students. - The existing student will be retained in the current stackable pool.
Re-activate	- The inactive stackable pool can be re-activated. - Once re-activated again, the stackable pool status will be "Active". - The system will start to load the new student if the current version is the latest version.

Below are the columns in the Stackable Pool Listing pages:

Column	Sorting	Description
Course name	Sortable	Displays the course name of the stackable pool.
Course code	Sortable	Displays the course code of the stackable pool.

Version	Sortable	Displays the version of the stackable pool.
Course category	Sortable	Displays the course category of the stackable pool.
Course type	Sortable	Displays the course type of the stackable pool.
Branch	Not sortable	Displays the branch of the stackable pool.
School	Not sortable	Displays the school of the stackable pool.
Status	Not sortable	When system create stackable pool, the status is “Active” once stackable course is being activated. When stackable pool is deactivated, the status will be “Inactive”.

3.2.2 View Stackable Pool Details

The stackable pool details page will retain below steps:

Step 1: General information

Refer to the prototype: [General information](#)

Below are the fields in the Step 1. General information on Stackable Pool details page:

Name	Control Type	Mandatory	Default value	Editable	Description
Step 1: General information					
Course name	Single line of text			No	Displays the name of the current course.
Course code	Single line of text			No	Displays the course code of the current course.
Course version	Single line of text			No	Displays the course version of the current course.
Course category	Single line of text			No	Displays the course category inherited from course level.
Course type	Single line of text			No	Displays the course category inherited from course level.
Branches	Single line of text			No	Displays the branch inherited from course level.
Schools	Single line of text			No	Displays the school inherited

					from course level.
Setup stackable course	Single line of text		Yes	No	Indicates if the current course is stackable course.
Created	Single line of text			No	Displays the created date and time of the current course.
Created by	Single line of text			No	Displays the user who created the current course inherited from course level.
Modified	Single line of text			No	Displays the modified date and time of the current course.
Modified by	Single line of text			No	Displays the user who lastly modified the current course inherited from course level.
Status	Single line of text		Commenced	No	The status is "Commenced" by default once ticked to setup as a stackable course and activated.
Section: Tags					
Tag column	Label			No	Displays the value of a tag for a course.

Step 2. Course intake details

Refer to the prototype: [Course structure tab](#)

Since there is no application and enrolment in stackable course, Minimum entry requirement tab is no longer applicable in stackable course.

On course intake details page, the system retains Course e-transcript/SOR tab, Course structure tab and Course certifications tab. On the Course structure tab, the system will display all the modules configured in the current stackable course.

Below are the fields in the Step 2. Course structure tab on Course intake details page:

Name	Control Type	Mandatory	Default value	Editable	Description
Pathway name	Single line of text		Pathway 1	No	Displays the pathway name of the current course.
Minimum requirement	Single line of text			No	Displays the minimum requirement either by module number or modular credit unit.
Number of elective modules	Single line of text			No	Displays the minimum number of elective modules for the pathway inherited from course level.
Module name	Single line of text			No	Displays the module name inherited from course level.
Module code	Single line of text			No	Displays the module code inherited from course level.
School	Single line of text			No	Displays the school of the module inherited from course level.
Credit units	Single line of text			No	Displays the credit units of the module inherited from course level.
Module type	Single line of text			No	Displays the module type inherited from course level.

3.3 Manage Course Catalogue

In terms of managing course catalogue, if the CET user chooses to publish the stackable course during the course configuration stage. In this case, the stackable course will be displayed in the “All courses” tab in the student portal.

However, if the CET user chooses not to publish the stackable course during the course configuration stage. In this case, the stackable course will not be displayed in the “All courses” tab in the student portal.

By default, stackable courses do not allow students to apply directly. Instead, students will apply to a normal course which is a modular course under the stackable course structure.

The rest remain the same (For further explanation, please refer to Stage 1 FS 6.5 Manage Course Catalogue).

4. Student Enrolment List

Refer to the prototype: [Student enrolment list](#)

4.1 Student enrolment list home page

For IHLs who will only offer the module as modular course separately. CET user will be able to tick the checkbox for stackable course. Student will apply for individual modular course separately, and be tracked the whole academic journey via stackable course pool.

For IHL who will only offer the full qualification as one course intake. CET user can leave the stackable course checkbox under course setup as unchecked. System will not create any stackable pool for the course, and all application process until graduation will be tracked in full qualification intake as current process.

For IHL who will offer full qualification as one course intake, but still willing to offer the stackable course as modular course intake. System allow CET user to tick the checkbox for stackable course, and create a normal full qualification course intake at the same time. For the student who applied for modular course intake, CET user will be able to track student academic journey under the stackable pool. For student who apply for the full qualification course intake, application process until graduation will be tracked under their applied normal course intake as current process, but those students also been tracked under stackable pool. There will be no downstream impact for student to be shown under stackable pool. And Student will be graduated from normal full qualification course intake. If student withdraw the full qualification course intake, both CET user and student will be able to use this stackable pool/academic journey to continue tracking their process. And apply for modular intake to complete the whole journey. Also, student can reinstatement themselves back to the full qualification course intake as current process.

For stackable course, system will automatically create a stackable pool to track student’s academic progress. There will be a timer job in the backend running daily at 00:01 am and system will scan if any students has been enrolled into any one of the modules under the stackable course. If yes, the corresponding student will be loaded and added to the stackable pool - “Student enrolment list” with an “Commenced” status. It would mean that the student has started his academic progress to do the stackable course.

Below are the fields in the stackable pool information card on Student Enrolment List page:

Name	Control Type	Mandatory	Default value	Editable	Description
Stackable pool information card					

Course code – Course name	Breadcrumb			No	- Displays the current stackable course name and course code. - Value list will be displayed in the format of [Course Name]-[Course Code]
Course category	Single line of text			No	Displays the course category inherited from course level.
Course type	Single line of text			No	Displays the course category inherited from course level.
Branch	Single line of text			No	Displays the branch of the stackable course.
School	Single line of text			No	Displays the school of the stackable course.
Course Version	Single line of text			No	Displays the version of the stackable course.
Status	Single line of text		Active	No	Displays the status of the stackable pool.

The Student Enrolment List page contains following filters, search box and buttons:

Filter & Search	Description
Filter: Enrolment status.	- Value list: Commenced, Graduated - The default filter value for Enrolment status is All.
Search	- Can search for student either using student name, student ID or NRIC/FIN.

Button	Description
Move	- User can use “Move” button to move one student to the other course version if necessary. - Further elaboration in Section 4.2.2 Manual Move.

Export	- Upon clicking, the system exports all the student information from the table into an excel file in bulk.
--------	--

Below are data fields in Student Enrolment List table:

Name	Control Type	Mandatory	Default value	Editable	Description
Student enrolment list table					
Student name	Single line of text			No	- Displays the name of the applicant/ student. -Default sorting order: alphabetical
Student ID	Single line of text			No	- Displays the student ID of the applicant/ student if any. -Default sorting order: alphabetical
NRIC	Single line of text			No	- Displays the NRIC/FIN of the applicant/ student if any.
Enrolment status	Single line of text			No	- Displays the current enrolment status of the student. - Value list: Commenced, Completed, Graduated

4.2 Student movement among course versions

4.2.1 Auto move details

When a new version of stackable course has been created, the system will automatically generate a new stackable pool. Normally, IHL will require student to continue the academic journey of this stackable course under the new version. To achieve this requirement and reduce the effort for CET user to move students from previous stackable pool to the new one. System will provide an "auto-move" function via a timer job to ensure that students are loaded in the most appropriate stackable pool. CET user will be informed via an email notification (refer to section 11) that a timer job will be triggered at 00:01 am next day, because the new

stackable pool has been automatically created. The system then assesses both stackable pools to determine the presence of common modules or equivalent modules, considering the module enrolment status of “In-progress”, “Completed” and “Failed”:

System only allow student to be existed under one of the version pool under the same stackable course. Once student has been moved to another version pool, all student module enrolment records will be moved together to the new version pool (some of the scenario will remove the student module level enrolment record from both version pools, it will be explained in following paragraphs). System will check all following scenarios for each student when auto move timer job has been triggered. If any module enrolment status falls within the “Not Move” action, system will keep that student under current version pool. Students will be moved to the new version pool only if all module enrolment status falls within “Move” action. (module enrolment status may be updated according to different scenarios, for more detail refer to the scenarios from below image):

Status	Version 1	Version 2	Action
In-Progress	Module A	Module A	Move, In-Progress under new Version Pool.
	Module A	Module B	Not Move
	Module A		Not Move
Completed	Module A	Module A	Move, Completed under new Version Pool.
	Module A	Module B	Move, Auto MECT under new Version Pool.
	Module A		Not Move
Failed	Module A	Module A	Move, Failed under new Version Pool.
	Module A	Module B	Move, Not display in Module Enrolment List, but in Transcript.
	Module A		Move, Not display in Module Enrolment List and Transcript.

Please note that failed module only with equivalent module under new version pool, will not display the failed attempt under both CET module enrolment list and student academic advancement page. All failed attempts will be displayed in transcript. CET user will be able to find this failed attempt under its own course intake or student record management. Student will be able to find this failed attempt under my course.

If user want to create a new stackable course with different course code but same course name and similar course structure and system has automatically created a stackable pool, system will load the same student twice under two stackable course pool. And student will be graduated from both stackable courses and get two course certificates.

If Module already been applied MECT, system will not auto apply MECT for the equivalent module of the MECT module again, unless they are the same move. For example, student completed module A from version 1, and there is module B from version 2 is equivalent to module A. System will automatically apply MECT for module B. Moving forward, if there is module C under version 3, which is equivalent to module B. system will not auto apply MECT for module C anymore. But if is module B under version 3, system will move the student to version 3.

In summary, system will find all equivalent module for the module below to the stackable course version. System will scan all student module enrolment record for the modules under the stackable course and the equivalent module for them. Those records came out will be the one considered as under this stackable course pool. System will only use the latest updated equivalence setting to apply the auto move rule. If equivalence setup has been changed, the previous module enrolment record already apply MECT will not be changed. After equivalence setup has been updated, the new module enrolment record will be loaded according to the new setup.

4.2.2 Manual move details

System will provide a new function to allow CET user manually move student between different version of stackable pool. There is a newly added “Move” button on the Student Enrolment List page only for stackable course. CET users can perform “Move” action manually to move the students. Students can be moved to any version if the system allows, for example, student can move from version 1 to version 2 or version 2 to version 3. Once the student is moved, all student enrolment records will be loaded under new version of stackable pool and been removed from previous stackable pool.

According to the auto move rule from section 4.2.1, there is only one scenario that student may be kept under previous version pool forever, which is the completed module cannot be found as common or equivalent module from new version pool. System will not keep this module enrolment record under both version pools, if CET user decide to move the student manually.

After CET user manually moves students to a previous version pool, the system may auto move student again if they still match the auto move rule.

Refer to the prototype: [Move button](#)

1. Once CET user selects a student and click on the “Move” button, the system will display a panel from the right side, as shown in the prototype.
2. A prompt message will appear, asking the CET user to choose which version to move the selected student to.
3. The dropdown value will display all the available version(s), if any, except the current stackable pool version.
4. After selecting the desired stackable pool version, CET users can proceed with the “Next” button.
5. The system will show more of the details in the next page as follows:

Refer to the prototype: [Move the student](#)

First table: Modules can be mapped (Common and Equivalent)

The system will compare the modules that student already completed, failed, applied MECT and still in progress between two stackable pools. System will check for they are common modules and equivalent modules and display into the table, and the mapping results will be clearly indicated (further mapping details refer to Section 4.2.1).

If the In-Progress and Failed module can be found as common module in destination stackable pool, it will be mapped. If the Completed or MECT modules can be found as common module or equivalent module, system will auto apply MECT.

Below are data fields in the first table:

Name	Description
Table 1: Module can be mapped:	
Source module	- Displays all the modules from current stackable pool that can be mapped from for the selected student.
Destination module	- Displays all the modules from new stackable pool that can be mapped to for the selected student.
Mapping result	- Displays the mapping result of each module pair (further elaboration in Section 4.2.1).

Second table: Source module cannot be mapped

Modules that are already completed but cannot be mapped (module may been removed from new version of the stackable course, or no equivalence has been setup for the module from previous stackable pool) will be listed in the second table. This table provides a clear overview of modules that do not have corresponding counterparts in the other version.

Below are data fields in the second table:

Name	Description
Table 2: Source module cannot be mapped:	
Source module	- Displays all the modules from current stackable pool that cannot be mapped from for the selected student.
Module enrolment status	- Displays all the current module enrolment status.

Third table: Destination modules you want to exempt

This table will exclude those modules that can be mapped, or load directly, and already applied MECT. The rest of the module that has not yet started will be displayed. CET users will be able to use this function to exempt the module while moving the students.

In scenarios where N modules from stackable pool Version 1 correspond to a single module in stackable pool Version 2 (N:1 equivalency), it is essential to provide CET users with the flexibility to exempt certain modules from mapping.

CET users can tick the checkboxes for the destination modules they wish to exempt from the mapping process. And CET user will need to input the module completion date, reason and supporting document for this exemption from each module. The module exemption for stackable course will only be tracked under the specific stackable course. This record will not be applied for another stackable course or normal intake.

Below are data fields in the second table:

Name	Description
Table 3: Destination modules you want to exempt:	
Destination module	- Displays the corresponding single module in stackable pool Version 2 to which the N modules from stackable pool Version 1 are mapped.
Assign a module completion date of the exempted module	- CET users can assign specific module completion dates to the module that has been exempted from mapping in the previous table. - The assigned module completion date will be taken into account in calculating the candidature period (further elaboration in Section 10.2.3).
Reason	- Allow CET user to input the reason for this exemption, it will be displayed on both module enrolment list and student academic advancement page.
Supporting Document	- CET user will be required to upload a supporting document for this module exemption action.

Last section: Exam series of the exempted module

The last section allows CET users to assign exam series for the exempted modules.

Below are data fields in the section:

Name	Control type	Description
Assign an exam series of the exempted module	Dropdown list	- Only utilize by ITE. - CET users can assign an exam series to the module that has been exempted from mapping in the previous table. - This is for the purpose of processing course graduation/completion. - The dropdown value list will include all the active exam series retrieved from the IHL master data. - Searchable and there is no default value.

5. Module Enrolment List

5.1 Module enrolment list home page

Refer to the prototype: [Module enrolment list](#)

The module enrolment list will list all student module level enrolment information. After a student is enrolled into the module from stackable course, the system will automatically load the student's module enrolment records into the list.

There will be a timer job in the backend run daily at 00:01 am and system will scan if students can be added to the Module enrolment list from the latest version of stackable pool. Once module is "Enrolled", "Completed", "Failed" or applied MECT, the corresponding student will be added to the Module enrolment list. CET user may use filter to sort and view student by module.

For common module (means the same module), it will be listed in module enrolment list once student has been enrolled. But for equivalent modules, it will only be listed in module enrolment list when the corresponding module has been completed, and system will auto apply for credit transfer for 1:1 equivalent module, and module exemption for 1:N equivalent modules.

Below are the fields in the Stackable pool information card on Module Enrolment List page:

Name	Control Type	Mandatory	Default value	Editable	Description
Stackable pool information card					
Course code – Course name	Breadcrumb			No	- Displays the current stackable course name and course code. - Value list will be displayed in the format of [Course Code]-[Course Name]
Course category	Single line of text			No	Displays the course category inherited from course level.
Course type	Single line of text			No	Displays the course category inherited from course level.
Branch	Single line of text			No	Displays the branch of the stackable course.
School	Single line of text			No	Displays the school of the

					stackable course.
Course Version	Single line of text			No	Displays the version of the stackable course.
Status	Single line of text		Active	No	Displays the status of the stackable pool.

The Module Enrolment List page contains following filters, search box and buttons:

Filter & Search	Description
Filter: Module enrolment status, Module name, Module code, Exam series, Semester/Term	- Value list of Module enrolment status: In progress, Def assessment, Granted exemption, Granted credit transfer, Completed, Failed. - The default filter value for all the filters is All.
Search	- Can search for student either using student name or student ID.

Button	Description
Module exemption	- Upon clicking, system will allow CET user to batch apply module exemption for multiple students.
Export	- Upon clicking, the system exports the student information di into an excel file in bulk.

Below are the data fields in Module Enrolment List table:

Name	Control Type	Mandatory	Default value	Editable	Description
Module enrolment list table					
Student name	Single line of text			No	- Displays the name of the applicant/ student. -Default sorting order: alphabetical
Student ID	Single line of text			No	- Displays the student ID of the applicant/ student if any. -Default sorting order: alphabetical
Course intake No.	Single line of text			No	- Displays the course intake number

					associated with the student's module enrolment records.
Module name	Single line of text			No	- Displays the module name associated with the student's module enrolment records.
Module code	Single line of text			No	- Displays the module code associated with the student's module enrolment records.
Module version	Single line of text			No	- Displays the module version associated with the student's module enrolment records.
Module type	Single line of text			No	- Displays the module type associated with the student's module enrolment records.
Number of credit units	Single line of text			No	- Displays the credit units for the module associated with the student's module enrolment records.
Load time	Date & Time			No	- Displays the date and time when the system adds the student's module

					enrolment records in the list.
Exam series	Single line of text			No	- Displays the exam series associated with the student's module enrolment records.
Semester/Term	Single line of text			No	- Displays the semester/term associated with the student's module enrolment records.
Module enrolment status	Single line of text			No	Value list: In progress, Def assessment, Granted exemption, Granted credit transfer, Completed, Failed
Reason	Single line of text			No	Only content value when module enrolment status is Granted exemption or Granted credit transfer. Value list: refer to section 10.2.4.
Attendance requirement	Single line of text			No	- Displays whether has met attendance requirement. - Value list: Not meet, Meet
Module grade	Single line of text			No	- Displays the module grade after results has been published

					(It will display the module final grade).
Academic list module status	Single line of text			No	- Displays the Module enrolment status of the original module in completion list.

5.2 Design of “Module exemption” button and functionality

Refer to the prototype: [Module Exemption](#)

To allow CET user to exempt the module for N:1 scenario of equivalent module, system provides a bulk module exemption function under module enrolment list for each stackable pool. For those students who are “Commenced” in the stackable pool, CET user will be able to exempt module for multiple students at once.

In the Module Enrolment List page, the system will add a “Module exemption” button. Once CET users click on “Module exemption” button, the system will appear a popup panel as shown in the prototype. In the panel, CET user will be able select the module that they want to apply for module exemption. System will have two options to allow CET user to decide whether they want to manually select student from the table below, or bulk upload student via excel.

System will list the student who has not been enrolled, applied MECT or completed selected module in the table when CET user select manual section. CET user can then select the corresponding students, assign module completion date and exam series for this module exemption function.

If CET user choose to bulk upload student via excel, system will export the student who has not been enrolled, applied MECT or completed selected module into the excel. CET will be input “Yes” as the value for students who need to be exempted. CET user can import the excel back to the system and assign module completion date and exam series for this quick module exemption function.

For both process, CET user need to upload a supporting document, because this exemption does not have approval process.

The module exemption for stackable course will only be tracked under the specific stackable course. This record will not be applied for another stackable course or normal intake.

Name	Control type	Mandatory	Description
Quick module exemption button			
Module selection	Dropdown list	Yes	- CET users select the specific module they want the student to be exempted from.
Manual Section	Radio button	Yes	- CET users choose this option and manually select the student.

Bulk Upload	Radio button	Yes	- CET users choose this option and bulk upload the student via excel.
Student List	Multi-choices dropdown list	Yes	- Scope: students in the module enrolment list, and have not in progress, completed or applied MECT for the corresponding module and the stackable course. - Can search for student either using student name or student ID. - Default sorting order: alphabetical order of student names
Reason	Single line of text	No	- Allow CET user to input the reason for this exemption, it will be displayed on both module enrolment list and student academic advancement page.
Supporting Document	Upload File	Yes	- CET user will be required to upload a supporting document for this module exemption action.
Assign a module completion date of the exempted module	Date	Yes	- CET users can assign specific module completion dates to the module that has been exempted from mapping in the previous table. - The assigned module completion date will be taken into account in calculating the candidature period (for further details, refer to section 10.2.3).
Assign an exam series of the exempted module	Dropdown list	No	- Only utilize by ITE. - CET users can assign an exam series to the module that has been exempted from mapping in the previous table. - This is for the purpose

			of processing course graduation/completion. - The dropdown value list will include all the active exam series retrieved from the IHL master data. - Searchable and there is no default value.
--	--	--	---

6. Request Management

Refer to the prototype: [MECT Request Task details](#)

With the introduction of stackable course, there would be no changes to the functions offered for normal intake.

However, for stackable course we have made the following changes as listed below:

Addition of two new fields for the evaluator to choose in the task details of the MECT request when doing evaluation.

- Assign an module completion date of the exempted module.
- Assign an exam series of the exempted module.

Name	Control type	Description
Assign an module completion date of the exempted module	Date	- CET users can assign specific module completion dates to the module that has been exempted from mapping in the previous table. - The assigned module completion date will affect the calculation of the candidature period (further elaboration in Section 10.2.3).
Assign an exam series of the exempted module	Dropdown list	- Only utilize by ITE. - CET users can assign an exam series to the module that has been exempted from mapping in the previous table. - This is for the purpose of processing course graduation/completion. - The dropdown value list will include all the active exam series retrieved from the IHL master data. - Searchable and there is no default value.

--	--	--

Refer to the prototype: [Request management-MECT \(Result list\)](#)

Removal of “Run eligibility check” button

The “Run eligibility check” button will be removed as system will handle the eligibility check to check whether the student is eligible for MECT as part of the enhancement offered under stackable course. System will run the timer job every night at 00:00am to scan all the module enrolment record. It will load all same module enrolment record from the stackable course into the stackable pool. And also auto apply MECT for the equivalent module from the stackable course, and listed them into the stackable pool as well. This is when the eligibility check applied.

Removal of “Import” function

The “Import” function will be removed as system has replaced the “Import” function with the “Module exemption” function as part of the enhancement offered under stackable course.

7. Academic Progress

Refer to the prototype: [Academic Overview](#)

After completing the grade confirmation and approval process of each module within the normal modular intakes, each student record will be synced and updated on Academic overview page of the stackable pool as well. CET users are still required to proceed with BOE endorsement and resulting publishing to student under the normal modular intakes but not within the stackable pool.

The logic remains the same (for further details, refer to Stage 3 FS 6.6.3 Academic Progress).

Module overview page will be removed for stackable pool, because the information under module overview will be the same as Module enrolment list page.

Below are the fields in the stackable pool information card on Academic Overview page:

Name	Control Type	Mandatory	Default value	Editable	Description
Stackable pool information card					
Course code – Course name	Breadcrumb			No	- Displays the current stackable course name and course code. - Value list will be displayed in the format of [Course Code]-[Course Name]
Course category	Single line of text			No	Displays the course category

					inherited from course level.
Course type	Single line of text			No	Displays the course category inherited from course level.
Branch	Single line of text			No	Displays the branch of the stackable course.
School	Single line of text			No	Displays the school of the stackable course.
Course Version	Single line of text			No	Displays the version of the stackable course.
Status	Single line of text		Active	No	Displays the status of the stackable pool.

The Academic Overview page contains following filters, search box and buttons:

Filter & Search	Description
Filter: Enrolment status.	- Value list: Commenced, Completed, Graduated - The default filter value for Enrolment status is All.
Search	- Can search for student either using student name or student ID.

Below are data fields in Academic Overview table:

Name	Control Type	Mandatory	Default value	Editable	Description
Academic overview table					
Student name	Single line of text			No	- Displays the name of the applicant/ student. -Default sorting order: alphabetical
Student ID	Single line of text			No	- Displays the student ID of the applicant/ student if any. -Default sorting order: alphabetical

Enrolment status	Single line of text			No	Value list: Commenced, Completed, Graduated
Modules Completed	Single line of text			No	- Displays the number of completed modules in the current stackable pool.
cGPA	Single line of text			No	- Displays the updated cGPA of the student in the current stackable pool.
OWA/CWA	Single line of text			No	- Displays the Overall Weighted Average for the course intake for the student.
Total credit units taken	Single line of text			No	- Displays the total number of credit unit student has taken for the course intake.

8. Assessment

The assessment processing will remain aligned with current procedures and practices (for further details, refer to Stage 3 FS 6. Assessment and Exam Management).

Lecturers will continue to access the normal modular intake to assign scores, while CET users will still need to handle grade confirmation and approval under the normal modular intake.

For stackable course which offered as separate modular course or PDC/MC course, they will go through existing BOE endorsement process. If CET user want to track student cGPA, academic overview page will provide all students under the stackable pool with their cGPA. And system will also provide one more BOE report template called “Stacked certificate BOE report/Stacked AA council report ” to display the students who stacked successfully. After user select a semester/term/exem series and click on Generate BOE report/Generate AA council report button. By selecting this report, system will list all stackable course that contained module under selected semester/term/exem series. User will be able to select corresponding stackable course and generate a BOE report for them. This BOE report will include student completed module, PDC/MC and Course from this semester/term/exam series. The report template referring to:

Stacked Certificate
BOE Report Template.

9. Graduation of Course Management

9.1 Academic List

9.1.1 Academic List Homepage

Refer to the prototype: [Academic List Homepage](#)

The academic list homepage features three tabs: "By normal course," "By stackable course," and "By course intake."

- The "By normal course" tab displays courses that have at least one version that is not designated as a stackable course. It maintains the same design as the current "By course" tab in the system.
- The new tab labelled "By stackable course" exclusively lists courses that have at least one version marked as a stackable course.
- The "By course intake" tab will remain unchanged from the current system.

Column, Filter and Button for "By stackable course" tab will remain the same with other tabs.

9.1.2 Merit list

First and foremost, if none of the course versions is designated as a stackable course, all the existing logics will remain unchanged, consistent with the current system.

Refer to the clickable prototype: [Merit List](#)

Upon marking any of the course versions as a stackable course, as shown in the prototype, a new button labelled "Apply DWM/COM recommendation rule" will be introduced on the page. Clicking this button will trigger the system to generate a merit student list based on the DWM/COM recommendation rule.

In stackable courses versions, the system will no longer automatically recommend students. CET users will need to click the button to generate the student list. This change is implemented due to students being added to the "ready to graduate" list at various times, without a clear cut-off time, unlike normal intakes.

For stackable course, system will not load student who reached maximum candidature into the merit list. But system will allow user to click on Apply DWM/COM recommendation rule button again after student repeat the module/apply module exemption/extend maximum candidature and reload related students into the list. Every time CET user click that button, system will regenerate the merit list based on new student scope from ready to complete/graduate list.

For normal intakes within non-stackable course versions, the merit list generation depends on the recommendation scope settings.

- If the recommendation scope is set as "Based on the course intake," the system will continue to employ the current logic, directly recommending students without the need for clicking the button.
- If the recommendation scope is configured as "Based on the course cohort" or "Based on the exam series," CET users will be required to click the button to apply the DWM/COM recommendation rule to students in the course-level "ready to complete" lists.

9.1.3 Completion/Graduation list

Completion List Display

In our current system, the completion list comprises three categories: "Module completion List", "Course completion List/Graduation List", and "PDC/MC completion List." For IHLs who do not offer stackable course intake, the "Module Completion List" will remain empty as all module completion results will be tracked within their respective normal intakes. And for other IHLs who also offer the course intake for stackable course, those module completion results will still be tracked under stackable course module completion list.

For non-semester based courses, system still be able to load the students when they are ready to complete or ready to graduate from the course. But CET user need to offline decide when they are going to complete/graduate the student from academic list.

All the columns in the completion list will remain unchanged. Furthermore, as illustrated in the prototype, in the "Course Completion List," when the "Candidature Status" is "Reached," a tooltip will be provided to indicate that the student has reached the candidature period and offer suggestions to the CET users about the next steps.

Completion Logic

Just as it operates in our current system, the system follows a sequential check process, first examining module-level completion, then PDC/MC level completion, followed by course level completion results. In other words, when a module is added to the "ready to complete" list, the system will perform a check to determine if the student qualifies to be added to the PDC/MC level or course level "ready to complete" list. Once all the modules within the PDC/MC or courses are completed, the student will be added to the corresponding completion list accordingly. Meanwhile, the system will extract the BOE date, exam series, and semester information from the last completed module and apply this data as the course-level information.

Furthermore, if a student has exceeded the maximum candidature period, they will be unable to complete or graduate. They will remain in the "ready to complete" list, and manual attempts to trigger completion or graduation will prove ineffective.

Additionally, we will continue to support the auto-graduation/completion rule for stackable courses.

9.1.4 Certificate List

In our current system, there are module certificate, course certificate and co-certificate and programme certificate under the certificate list.

Within the context of stackable courses:

- Course Certificates and Co-certificates can be issued.
- Module Certificates will not be issued for stackable courses; they are issued in the corresponding normal intake instead.

Furthermore, PDC/MC certificates can be issued when the requirements are met. If the same PDC/MC certificate has been issued previously in other courses, it will be issued again in the stackable course.

Additionally, we will continue to support the auto-issue rule for stackable courses. Other existing function related with certificate will remain the same with current process.

9.1.5 E-Transcript/SOR

Course-level e-transcripts and Statements of Results (SOR) are available, but module-level ones will not be supported. Additionally, Semester SOR will not be offered because stackable courses do not have semesters or terms.

Furthermore, we will continue to support the auto-issue rule for stackable courses.

9.2 Certificate Bank

As described in the FS 3, the system provides the certificate bank function to store the data and critical information of the certificates provided by each IHL. The information provided in the certificate bank will be used to generate a certificate with the correct information.

To provide more flexibility, we will allow PDC/MC to be set up as e-certificates.

10. Student Portal

With the introduction of stackable courses, there would be enhancements made to the existing functions within the student portal.

10.1 Request & Task – Enhancement to submission of MECT request

Refer to the prototype: [Request & Task - MECT](#)

For stackable courses, the only request that is supported within the request & task tab in the student portal is MECT request. All other requests that are offered in normal course will not be available in stackable course.

There is no change to the current logic of raising a request in student portal. (For further explanation, please refer to section 8.5 Request & Task in Stage 2 FS v1.0.)

Under the Request & Task function, enhancements would be made specifically for the submission of MECT request.

With the enhancement made to the submission of MECT request, when student tries to submit a MECT request, system can also load the stackable intake that the student belongs to for him/her to choose from.

All modules within the stackable course that have not been completed will be available for students to choose from to raise MECT request.

As the MECT request is being raised by students, it would be treated like a normal intake and the result can be loaded as MECT across the system. Therefore, in the following scenario:

Scenario: When student is being moved from version 1 to version 2 intake. In this scenario, in version 1 the module is MECT, system will load the student into version 2 first so the module will still be MECT in version 2. The moment the student is successfully moved into version 2, the student will be removed from version 1 intake. Therefore, the record of the module MECT status is not lost and can still be used within the system.

Stackable Course A (Version 1)	Scenario	Stackable Course A (Version 2)
Module 1 (ME/CT)	Student being moved from version 1 to version 2 intake	Module 1 (ME/CT)
Module 2		Module 6
Module 3		Module 7
Module 4		Module 8

10.2 Academic Advisement

Under the Academic advisement function, enhancements would be made to the display of the homepage as well as the academic details.

10.2.1 Homepage

Refer to the prototype: [Academic Advisement Homepage](#)

For the display and arrangement of stackable course cards in the academic advisement homepage, it will be sorted based on the latest enrolled module among all stackable course cards.

Students will see the stackable course card once they are enrolled into one of the modules of the stackable course.

Only stackable course cards will be displayed on the academic advisement homepage. For those stackable courses that has already completed the academic journey, system will display completed/graduated status on the course card. Otherwise, it will display commenced status.

Filter & Search	Description
-----------------	-------------

Filter: Institution	- By clicking the edit icon, users can change the selected options, and the records shown will be changed to only matched records. - The default filter value for Institution is All. - The available filter values to choose from are the institution that the student belong to.
Filter: Status	- By clicking the edit icon, users can change the selected options, and the records shown will be changed to only matched records. - The default filter value for Status is All. - The available filter values to choose from are “Commenced”, “Completed” and “Graduated”.
Search	- Search for the course either using Course name or Course code.
Course card status	- There will be different statuses reflected on the course card depending on the scenario. - “Commenced” status – student will see this status reflected on their course card when they are enrolled into the stackable course, but have not complete or graduate from the stackable course. - “Completed” status – student will see this status reflected on their course card when they completed the stackable course. - “Graduated” status – student will see this status reflected on their course card when they have graduated from the stackable course.

10.2.2 Course details

Refer to the prototype: [Academic Advisement Course Details](#)

Course details is referring to the details of the stackable course.

Below are the data fields for course details:

Name	Control Type	Mandatory	Default Value	Editable	Description
Course Code - Course name	Single line of text			No	Displays the code and name of the course.
Course category	Single line of text			No	Displays the course category of the course.

Course type	Single line of text			No	Displays the course type of the course.
cGPA	Number			No	Displays the cGPA of the student. Tooltip: This cGPA is not final and may be subjected to changes if you did not complete all the required modules within the candidature period.
Candidature period	Single line of text			No	- Displays the candidature period of the course. - The format is XX months. - There will also be a tooltip to inform the student that they need to complete all the necessary modules within the candidature period.

To allow students easily track their modules detail information. An addition of “Academic details” table will be displayed under academic advisement course detail page.

All modules that the student has In-Progress, completed/failed, granted exemption or granted credit transfer under the stackable course will be displayed in the “Academic details” table. There would also be an addition of a tooltip to mark which module has exceeded the maximum candidature (for further detail, refer to section 10.2.3). Default sorting for academic details will be module name first, and followed by exam series/semester/term.

For the display of module details in academic advisement, please refer to the following fields:

Name	Control Type	Mandatory	Default Value	Editable	Description
------	--------------	-----------	---------------	----------	-------------

Module name	Single line of text			No	Displays the name of the module. Allow sorting.
Module code	Single line of text			No	Displays the code of the module.
Course intake No.	Single line of text			No	Displays the course intake number of the module under the stackable course.
Exam series	Single line of text			No	Displays the exam series that the module is being tied to.
Semester/Term	Single line of text			No	Displays the semester/term that the module is being offered in.
Module type	Single line of text			No	Displays the type of the module.
Module enrolment status	Single line of text			No	Displays the status of the student's enrolment progress for the module (for further detail, refer to section 10.2.4).
Reason	Single line of text			No	Only content value when module enrolment status is Granted exemption or

					Granted credit transfer. Value list: refer to section 10.2.4.
Attendance percentage	Number			No	Displays the student's attendance percentage for the module.
Credit unit	Number			No	Displays the credit unit for the module.
Grade	Alphabet			No	Displays the grade obtained by student for the module.

To allow students to have a clear understanding of their progress of the stackable course, system will display their progress under academic journey section.

System will display the different pathways leading to the completion of different course certificates based on the modules that the student has completed. Within the course structure, system will display the minimum requirement that the student will need to meet to fulfil the completion requirement for each pathway.

All modules displayed in the course structure under the pathway will show module details such as "Module name", "Module type", "Name of certificate" and the number of credit units tagged to the module.

All modules displayed in academic journey will display the matching module enrolment status such as "In-Progress", "Completed", "Failed", "Granted exemption", "Granted credit transfer". The module which the student has not been enrolled will display "Not started" status. If module already exceeded maximum candidature, the tooltip from academic detail page will also be displayed in academic journey.

10.2.3 Logic – Calculation of candidature period

The duration of the candidature period is dependent on the max candidature period tagged to the stackable course certificate. Module exceeded maximum candidature will not be displayed in transcript.

E.g., within the stackable course structure, the last module end date is 31/08/2023 and the duration of the candidature period is 60 months which is 5 years, therefore the start date of the candidature period will be 01/09/2018. The candidature period will be counted from the back based on the last module end date minus maximum candidature period to get the value of the start date of the candidature period. In this case candidature period will be 01/09/2018 - 31/08/2023. Module end date will use module completion date from academic list. System will only count module completion date within the maximum candidature as valid module. Module completion date will be the date that student has been moved from ready to complete to completed tab. If user has been setup a BOE date, it will be the BOE date.

Once the max candidature period is changed in the certificate bank, the corresponding student's candidature period will also be affected with the new setting.

The student cannot complete/graduate from the course once they have reached maximum candidature.

To allow student to complete/graduate from the stackable course once they have reached their maximum candidature, there are 3 ways to do so:

- Extend the max candidature from the student record management. The extension of max candidature will be done by counting backward.
- Student will study the module that exceeded the candidature period again (could be the same or equivalent module), and the system will replace the expired module and the new module will have a new module completion date to meet the candidature period.
- Student can apply a normal course intake and apply for MECT directly, even if the module has a status of ME/CT the student will still be added into the module enrolment list and system will use the corresponding module completion date to calculate, still, this MECT record will replace the previous expired one.

10.2.4 Display of equivalencies

Refer to the prototype: [Academic Advisement Course Details](#)

For the display of module equivalencies in academic advisement, it would mainly cover two scenarios:

- Granted module exemption.
- Granted credit transfer.

Granted module exemption:

Scenario	Description
Auto module exemption	• Within the student portal academic advisement page in the academic details table on the module itself, system will add a tooltip beside the "Granted exemption" status displaying a message as "The module is granted exemption because you had completed the <module.name>". • In this case, the placeholder <module.name> would refer to the name of the completed equivalent module.
Manual exemption	• Within the student portal academic advisement page in the academic details table on the module itself, system will add a tooltip beside the "Granted exemption" status displaying a message as what CET user has been input for the reason during the manual exemption process.
Student request module exemption	• Within the student portal academic advisement page in the academic details table on the module itself, system will add a tooltip beside the "Granted exemption" status displaying a message as "The module is granted exemption by student's request".

Granted credit transfer:

Scenario	Description
Auto credit transfer	- Within the student portal academic advisement page in the academic details table on the module itself, system will add a tooltip beside the “Granted credit transfer” status displaying a message as “The module is granted credit transfer because you had completed the <module.name>”. - In this case, the placeholder <module.name> would refer to the name of the completed equivalent module.
Student request credit transfer	Within the student portal academic advisement page in the academic details table on the module itself, system will add a tooltip beside the “Granted credit transfer” status displaying a message as “The module is granted credit transfer by student’s request”.

10.2.5 Academic documents

Refer to the prototype: [Academic Advisement Academic Documents](#)

No change for academic documents page, but with an addition of new filter – Certificate type:

Filter & Search	Description
Filter: Certificate type	- By clicking the edit icon, users can change the selected options, and the records shown will be changed to only matched records. - The default filter value for Certificate type is All. - The available filter values to choose from are “Digital certificate” and “e-certificate”.
Search	- Search by certificate name

There would also be two addition fields, semester and exam series to the existing fields.

Name	Control Type	Mandatory	Default Value	Editable	Description
Certificate Name	Single line of text			No	- Displays the name of the certificate. - Sortable
Certificate type	Single line of text			No	- Displays the type of certificate the student achieved. - Value list: Digital certificate, e-certificate - Sortable

Semester/Term	Single line of text			No	Displays the semester/term that the module is being offered in.
Exam series	Single line of text			No	Displays the exam series that the module is being tied to.
Issue date	Date			No	Displays the date when the certificate is issued to the student.

11. Student Record

Refer to the prototype: [Student record - Course information](#)

For stackable course, CET user can navigate to the “Course information” tab under student record to search for the stackable course that the student is studying.

Upon clicking on the name of the stackable course, CET user would be able to see the details of the stackable course.

On the course details section, there will be removal of some fields and addition of some fields as listed:

Removal of “Billing by” field

The “Billing by” field will be removed as students will not be billed by course in stackable course but instead will be billed based on the modules taken under the stackable course structure.

Removal of course intake related fields

“Course intake status”, “Course intake start date” and “Course intake end date” field will be removed as there is no intake concept for stackable course.

Removal of “Subsidy eligibility” field

The “Subsidy eligibility” field will be removed as billing by course is not available for stackable course and therefore subsidy would not be available.

Addition of “cGPA” field

There will be an addition of a new cGPA field to indicate the cGPA for the stackable course.

On the Academic documents section, there will be addition of an additional field:

Addition of “Exam series” field

There will be an addition of a new exam series field to indicate the exam series that is tagged to the academic document.

There will be addition of some new fields in the module details as listed:

Name	Control Type	Mandatory	Default Value	Editable	Description
Module code	Single line of text			No	- Displays the code of the module. - Sortable
Module version	Number			No	- Displays the version of the module. - Sortable
Course intake No.	Single line of text			No	Displays the number of course intake. - Sortable
Load time	dd/mm/yyyy hh:mm			No	- Displays the time when the student got loaded into the module intake. - Sortable
Exam series	Single line of text			No	- Displays the exam series that is tagged to the module. - Sortable
Semester/Term	Single line of text			No	- Displays the semester/term that the module is being offered in. - Sortable
Attendance requirement	Single line of text			No	- Displays whether the student meet the attendance requirement of the module.

Removal of hyperlink to module name in module details section

The hyperlink attached to the module name in module details section will be removed and CET user can view the module details through the module course intake view.

Removal of "Payment information" section

The whole "Payment information" section consisting of fields such as "Payment status", "PSEA status", "Other payment mode status", "SFC status" and "GIRO status" will be removed as students will not be able to make payment through billing by stackable course.

12. Service Management

Refer to the prototype: [Service Management](#)

System will provide a new service under service management, admin services tab called stackable course.

It allow CET user configures the email notifications setting for stackable course on branch, school, course category, course type level.

It will allow CET user to setup notifications to students when module is manually exempted or when student is auto/manually move to other stackable pool. And it also allows CET user to setup notification to CET user such as course owner or course intake owner when student are moved automatically.
